The examples are especially helpful for self study. The treatment of spectral band properties of gases has been made current and the methods are described in detail and illustrated with examples. The combination of radiation with conduction and or convection has been given more emphasis and has been merged with results for radiation alone that serve as a limiting case. This increases practicality for energy transfer in translucent solids and fluids. A comprehensive catalog of configuration factors on the CD that is included with each book provides over 290 factors in algebraic or graphical form. Homework problems with answers are given in each chapter and a detailed and carefully worked solution manual is available for instructors. **Thermal Radiation Heat Transfer** Robert Siegel, John R.
