### Chapter 1 – Intro to Info Systems

#### Chapter Outline

- 1.1 Why Should I Study Information Systems?
- 1.2 Overview of Computer-Based Information Systems
- 1.3 How Does IT Impact Organizations?
- 1.4 Importance of Information Systems to Society

#### Learning Objectives

1. Identify the reasons why being an informed user of information systems is important in today's world.
2. Describe the various types of computer-based information systems in an organization.
3. Discuss ways in which information technology can affect managers and non-managerial workers.
4. Identify positive and negative societal effects of the increased use of information technology.

#### Teaching Tips and Strategies

Today's students use technology in ways that were not even dreamed of just a decade ago. However, because these students have grown up surrounded by and using various technologies, information technology has become an integral part of their lives. Unfortunately, many students seldom think about the whys and wherefores behind the technologies they use every day.

I have found they often fail to recognize, understand or even see how information technology impacts them, their lives and their careers. So it is important to let them know what is in it for them, even if they are not majoring in information Systems. The textbook authors do a good job of this by including a "What's In It For Me?" section at the start of each chapter.

Throughout this course, it is important for us, their instructors, to encourage our students to step back and observe the bigger picture as to what comprises the fundamentals of Management Information Systems. Unfortunately, if you have not found out already, you will find some students who will think this class is boring or even complain they already "know it all".

Point out that they should look at the "What's In It For Me?" section of the chapters. This should be done early in the course. As part of your course introductions on the first day of class, you might consider

*Multiagent Engineering* Stefan Kirn, Otthein Herzog, Peter Lockemann, Otto Spaniol, 2006-08-10 1 Multiagent Engineering A New Software Construction Paradigm Multiagent systems have a long academic tradition They have their roots in distributed problem solving in Artificial Intelligence AI from where they emerged in the mid eighties as a distinctive discipline Research in multiagent systems owes much to the work of Rosenschein on rationality and autonomy of intelligent agents the European MAAMAW workshop series and last but not least the famous readings of Bond Gasser 1988

and Jacques Ferber's book on multiagent systems 1991 It gained further by a public discussion via the Distributed AI mailing list in summer 1991 when the pioneers of the field compared in much detail the concepts of distributed problem solvers to multiagent systems Within only five years a new exciting field of research had been established Now 15 years later the field has matured to a degree that allows the results of academic research to be passed on to practical use and commercial exploitation This potential coincides with a need for much larger flexibility of our IT infrastructure in light of its highly distributed character and extreme complexity but also the global character of the business processes and the large number of business partners due to outsourcing and specialization Many experts claim that multiagent systems are the right software technology for the needed IT infrastructure at the right time The appeal has much to do with the broad perspectives of multiagent systems research
