Using Additional Information in Streaming Algorithms Raffael Buff, 2016-12 Streaming problems are algorithmic problems that are mainly characterized by their massive input streams Because of these data streams the algorithms for these problems are forced to be space efficient as the input stream length generally exceeds the available storage The goal of this study is to analyze the impact of additional information more specifically a hypothesis of the solution on the algorithmic space complexities of several streaming problems To this end different streaming problems are analyzed and compared The two problems most frequent item and number of distinct items with many configurations of different result accuracies and probabilities are deeply studied Both lower and upper bounds for the space and time complexity for deterministic and probabilistic environments are analyzed with respect to possible improvements due to additional information The general solution search problem is compared to the decision problem where a solution hypothesis has to be satisfied

*Scalable Continuous Media Streaming Systems* Jack Lee,2005-06-17 Continuous media streaming systems will shape the future of information infrastructure The challenge is to design systems and networks capable of supporting millions of concurrent users Key to this is the integration of fault tolerant mechanisms to prevent individual component failures from disrupting systems operations These are just some of the hurdles that need to be overcome before large scale continuous media services such as video on demand can be deployed with maximum efficiency The author places the subject in context drawing together findings from the past decade of research whilst examining the technology s present status and
