Science and Technology ICMST 2011 September 16 18 2011 Singapore International Journal of Applied Mathematics and Computer Science ,2005 *Adaptation and Learning in Control and Signal Processing 2001* S. Bittanti,2002-09-19 In control and signal processing adaptation is a natural tool to cope with real time changes in the dynamical behaviour of signals and systems In this area strongly connected with prediction and identification there has been an increasing interest in switching and supervising methods Moreover in recent years special attention has been paid to the ideas evolving round the theory of statistical learning as a potential tool of improved adaptation The IFAC workshop on Adaptation and Learning in Control and Signal Processing in 2001 gathered together experts in the field and interested researchers from universities and industry to present a full picture of the area This proceedings volume presents papers covering the following subjects Model reference and predictive control Multiple model control Adaptive control I II Adaptive control and learning Learning Adaptive control of nonlinear systems I II Supervisory control Neural networks for control PID design methods Sliding mode Adaptive filtering and estimation Identification methods I II **Sliding Modes in Control and Optimization** Vadim I. Utkin,2013-03-12 The book is devoted to systems with discontinuous control The study of discontinuous dynamic systems is a multifacet problem which embraces mathematical control theoretic and application aspects Times and again this problem has been approached by mathematicians physicists and engineers each profession treating it from its own positions Interestingly the results obtained by specialists in different disciplines have almost always had a significant effect upon the development of the control theory It suffices to mention works on the theory of oscillations of discontinuous nonlinear systems mathematical studies in ordinary differential equations with discontinuous righthand parts or variational problems in nonclassic statements The unremitting interest to discontinuous control systems enhanced by their effective application to solution of problems most diverse in their physical nature and functional purpose is in the author s opinion a cogent argument in favour of the importance of this area of studies It seems a useful effort to consider from a control theoretic viewpoint the mathematical and application aspects of the theory of discontinuous dynamic systems and determine their place within the scope of the present day control theory The first attempt was made by the author in 1975 1976 in his course on The Theory of Discontinuous Dynamic Systems and The Theory of Variable Structure Systems read to post graduates at the University of Illinois USA and then presented in 1978 1979 at the seminars held in the Laboratory of Systems with Discontinuous Control at the Institute of Control Sciences in Moscow **Variable Structure Systems, Sliding Mode and Nonlinear Control** K.D. Young,Ü. Özgüner,1999-08-18 This book comprises a selection of papers that were first presented at VSS98 5th International Workshop on Variable Structure Systems held in Sarasota Florida This workshop was the fifth in a series of VSS international workshops and the first to be held in the United States Work presented herein on theoretical developments and applications on VSS and Sliding Mode reflects how trends have advanced beyond the original ideas that are now well documented in a number of books and research monographs In particular the concepts of Sliding Sector and Second Order Sliding Mode

introduced in this volume will stimulate discussions and invite further extensions Also the focus on Sampled Data systems represents a positive trend towards practical industrial implementations of sliding mode controllers
