Senate, 1930 Includes special sessions **Signs for Developing Reading** Emil Holmer, 2016-05-23 Reading development is supported by strong language skills not least in deaf and hard of hearing DHH children The work in the present thesis investigates reading development in DHH children who use sign language attend Regional Special Needs Schools RSNS in Sweden and are learning to read The primary aim of the present work was to investigate whether the reading skills of these children can be improved via computerized sign language based literacy training Another aim was to investigate concurrent and longitudinal associations between skills in reading sign language and cognition in this population The results suggest that sign language based literacy training may support development of word reading In addition awareness and manipulation of the sub lexical structure of sign language seem to assist word reading and imitation of familiar signs i.e. vocabulary may be associated with developing reading comprehension The associations revealed between sign language skills and reading development support the notion that sign language skills provide a foundation for emerging reading skills in DHH signing children In addition the results also suggest that working memory and Theory of Mind ToM are related to reading comprehension in this population Furthermore the results indicate that sign language experience enhances the establishment of representations of manual gestures and that progression in ToM seems to be typical although delayed in RSNS pupils Working memory has a central role in integrating environmental stimuli and language mediated representations and thereby provides a platform for cross modal language processing and multimodal language development En god språklig framgång bidrar till god lärarutveckling inte minst hos döva och hörande barn Studierna som ingår i avhandlingen undersöker lärarutveckling hos DHH elever som gör språkteckenspråkiga specialskolor och som har lärt att tala sign att lärarutvecklingen

sa Arbetets huvudsakliga syfte var att underska om deras lsförstås kan förbättras via datoriserad teckenspråksbaserad lärning. Ett annat syfte var att underska samtidiga och longitudinella samband mellan lsförstås kan och kognition i samma population. Resultaten indikerar att teckenspråksbaserad lärning kan bidra till ordlydningsutveckling. Vidare pekar resultaten på att medvetenhet om och manipulation av teckenspråkets sublexikala struktur stöttar lsförstås kan och dessutom att imitation av kendte tecken i ett vokabulär var associerat med utvecklingen av barnens lsförståelse. Dessa fynd visar att teckenspråkskunskaper kan utgå från en grund för lärutveckling hos teckenspråkiga DHL-elever. Resultaten indikerade även att arbetsminne och Theory of Mind (ToM) är relaterade till lsförståelse i denna grupp. Vid sidan av resultaten rörande lärutveckling framkom också att teckenspråkserfarenhet leder till starkare etablering av representationer av manuella gester och vidare att barnens mentaliseringssätt visar en framgångsrik progression om nörsenad. En implikation av detta är att insatser som stöttar utveckling av teckenbaserade representationer och deras användning vid bearbetning av skrivet språk kan främja lärutveckling hos teckenspråkiga DHL-elever. Arbetsminne förstås genom sin roll i integration mellan inkommande stimuli och språkmedierade representationer fungerar som en plattform för modalitetsverskridande språkbearbetning och multimodal språkutveckling.
