Lavender, Ryusuke Takechi, Sarah C. Hellewell, Keisuke Kawata, 2025-10-28 Traumatic brain injury TBI is caused by a blow to the head or sudden ballistic head movement TBI can occur as a result of a collision such as in a motor vehicle accident or as a result of a fall which can happen in several contexts such as sport military service and training or accidental falling TBI is categorised as mild moderate or severe based on a number of signs and symptoms Multiple occurrences of injuries can have devastating consequences for patients when the injuries are in the mild category but repeated over several years as seen in sporting contexts In recent years the evidence for a link between mild traumatic brain injury and chronic traumatic encephalopathy CTE has been mounting rapidly Treatment of TBI varies greatly across the levels however mild TBI is often under reported and therefore may go untreated This is particularly common in sporting contexts where athletes and their coaches are very keen to reduce the recovery period and hasten return to play Common assessment methods may be insufficient for making the return to play decision New assessment methods are needed Rehabilitation methods also need to be optimised to ensure the player has fully recovered to protect the player and others from an increased risk of further injury This Research Topic focuses on brain injury assessment and interventions to improve recovery from mild moderate or severe TBI categories We welcome original research articles minireviews reviews comments and meta analyses employed in animal or human studies relevant to brain injury assessment and rehabilitation interventions      **HCI International 2021 - Late Breaking Posters** Constantine Stephanidis, Margherita Antona, Stavroula Ntoa, 2021-11-05 This two volume set CCIS 1498 and CCIS 1499 contains the late breaking posters presented during the 23rd International Conference on Human Computer Interaction HCII 2021 which was held virtually in July 2021 The total of 1276 papers and 241 posters included in the 39 HCII

**Rethinking College Education** George Allan, 1997. Not a method of turning your degree back in and having your loans forgiven but an argument that by becoming vocational schools measured by reduced cost and efficient production colleges and universities are neglecting their essential purpose. The reason for college education, says Allan, is to provide an environment within which students can absorb the moral practices that determine how they can acquire and evaluate knowledge, best conduct their lives and become responsible adults. He maintains that such learning requires imagination, dialogue, conversation and cultured intercourse. Annotation copyrighted by Book News Inc, Portland, OR.

[Rethinking Inequality: Decomposition, with Evidence from Rural China](#) Jonathan Morduch, Terry Sicular, 1998.

**Rethinking the Family** Stanford University. Center for Research on Women, 1982.

Twelve original essays chart the latest developments in the debate over the future of the family. Focusing on the interaction between feminist critiques and recent defenses of traditional views of the family, this book highlights the second stage of contemporary feminist rethinking of the family. Outstanding scholars from a variety of disciplines examine key issues in this debate: the idea of the monolithic family, sexual division of labor and inequality, motherhood, parenting and mental illness, the relationship between family, class and state. This book makes it clear why the family has emerged in the last decade as the political issue to claim everyone's attention.

**Rethinking Social Policy** Christopher Jencks, 1992. In a fervent appeal for clearer thinking on social issues, Christopher Jencks reexamines the way Americans think about race, poverty, crime, heredity, welfare and the underclass. Arguing that neither liberal nor conservative ideas about these issues withstand close scrutiny, he calls for less emphasis on political principles and more attention to specific programs. Jencks describes how welfare policy was dominated in the early 1980s by conservatives who promoted ideas that justified cutting back sharply on the social programs of Lyndon Johnson's Great Society. They believed that a period of sustained economic growth with low taxes and free markets would do more to help poor people than coddling them with government assistance. Despite the economic expansion of the later Reagan years, however, the problems of persistent poverty grew even more serious. The liberals took the initiative in the late 1980s but their proposals failed to win broad popular support. With clarity and a gift for apt analogy, Jencks analyzes influential books on such subjects as affirmative action (Thomas Sowell), the safety net (Charles Murray), the effects of heredity on learning and propensity to commit crime (James Q. Wilson and Richard Herrnstein), ghetto culture and the underclass (William J. Wilson). His intention throughout is to unbundle the empirical and moral assumptions that traditional ideologies tie together, making the reader's picture of the world more complicated. In other words, to force us, readers and policymakers, to look at the way various remedial plans actually succeed or fail. For example, he believes that until we transform AFDC so that it reinforces rather than subverts American ideals about work and marriage efforts to build a humane welfare state, it will never succeed. Other prescriptions, initially surprising and sometimes shocking, show demonstrable good sense once they are examined. As the author says, "If this book encourages readers to think about social policy more concretely, it will have served its primary purpose."
