**American Forests** Char Miller, 1997 American Forests is an interdisciplinary collection of essays that explore the impact of forestry on natural and human landscapes since the mid nineteenth century It has two main goals to present some of the most compelling arguments that have guided our understanding of the complex and evolving relationship between trees and people in the United States and to point out those aspects of this tangled interaction that we have yet fully to understand or to articulate Preface ix

## **Legacies of Dust: Land Use and Labor on the Colorado**

**Plains** Douglas Sheflin, 2019-06 2019 Choice Outstanding Academic Title 2020 Center for the Study of the American West CSAW Award for Outstanding Western Book Finalist The Dust Bowl of the 1930s was the worst ecological disaster in American history When the rains stopped and the land dried up farmers and agricultural laborers on the southeastern Colorado plains were forced to adapt to new realities The severity of the drought coupled with the economic devastation of the Great Depression compelled farmers and government officials to combine their efforts to achieve one primary goal keep farmers farming on the Colorado plains In Legacies of Dust Douglas Sheflin offers an innovative and provocative look at how a natural disaster can dramatically influence every facet of human life Focusing on the period from 1929 to 1962 Sheflin presents the disaster in a new light by evaluating its impact on both agricultural production and the people who fueled it demonstrating how the Dust Bowl fractured Colorado's established system of agricultural labor Federal support combined with local initiative instituted a broad conservation regime that facilitated production and helped thousands of farmers sustain themselves during the difficult 1930s and again during the drought of the 1950s Drawing from western environmental transnational and labor history Sheflin investigates how the catastrophe of the Dust Bowl and its complex consequences transformed the southeastern Colorado agricultural economy

**How to Cool the Planet** Jeff Goodell, 2010-04-15 Thoughtful informative and darkly entertaining It's the best treatment of this important and scary topic you can find Elizabeth Kolbert Right now a group of scientists is working on ways to minimize the catastrophic impact of global warming But they're not designing hybrids or fuel cells or wind turbines They're trying to lower the temperature of the entire planet And they're doing it with huge contraptions that suck CO<sub>2</sub> from the air machines that brighten clouds and deflect sunlight away from the earth even artificial volcanoes that spray heat reflecting particles into the atmosphere This is

the radical and controversial world of geoengineering which only five years ago was considered to be fringe But as Jeff Goodell points out the economic crisis combined with global political realities is making these ideas look sane even inspired Goodell himself started out as a skeptic concerned about tinkering with the planet's thermostat We can't even predict next week's weather so how are we going to change the temperature of whole regions What if a wealthy entrepreneur shoots particles into the stratosphere on his own Who gets blamed if something goes terribly wrong And perhaps most disturbing what about wars waged with climate control as the primary weapon There are certainly risks but Goodell believes the alternatives could be worse In the end he persuades us that geoengineering may just be our last best hope a Plan B for the environment His compelling tale of scientific hubris and technical daring is sure to jump start the next big debate about the future of life on earth Goodell explores with infectious curiosity and thoughtful narration this strange promising and untested suite of climate fixes *BusinessWeek* A quick enjoyable read through a complex timely topic And after you read it you'll never look at the sky or the ocean or Earth really in quite the same way again *The Christian Science Monitor* *Water, Land, and Law in the West* Donald J. Pisani, 1996 The series presents an interdisciplinary approach to the use and misuse of resources in the American West This volume comprises essays written between 1982 and 1994 and previously published in journals such as *Western Historical Quarterly* *J of American History* and *Environmental History Review* Pisani one of the nation's leading environmental and Western historians highlights the central role played by land water and timber allocation in the American West and shows how efforts to achieve justice and efficiency were compromised by the region's obsession with achieving rapid economic growth Annotation copyright by Book News Inc Portland OR *American Decades* Vincent Tompkins, Judith Baughman, Victor Bondi, Richard Layman, Eric L. Bergeron, James F. Tidd, 1995 Intended as a reference source for American social history this volume discusses the people events and ideas of the 1940s After an introductory overview and chronology subject chapters follow with subject specific timelines and alphabetically arranged entries

**Program** Organization of American Historians, 1981 **Weather by the Numbers** Kristine C. Harper, 2012-01-13 The history of the growth and professionalization of American meteorology and its transformation into a physics and mathematics based scientific discipline For much of the first half of the twentieth century meteorology was more art than science dependent on an individual forecaster's lifetime of local experience In *Weather by the Numbers* Kristine Harper tells the story of the transformation of meteorology from a guessing science into a sophisticated scientific discipline based on physics and mathematics What made this possible was the development of the electronic digital computer earlier attempts at numerical weather prediction had foundered on the human inability to solve nonlinear equations quickly enough for timely forecasting After World War II the combination of an expanded observation network developed for military purposes newly trained meteorologists savvy about math and physics and the nascent digital computer created a new way of approaching atmospheric theory and weather forecasting This transformation of a discipline Harper writes was the most important

intellectual achievement of twentieth century meteorology and paved the way for the growth of computer assisted modeling in all the sciences    **The Papers of Joseph Henry: January 1841-December 1843 : the Princeton years** Joseph Henry,1972    *Weather and Climate* Kristine Harper,2014-05-14 Contains a history of weather and climate providing definitions and explanations of related topics plus brief biographies of scientists of the twentieth century    [The Papers of Joseph Henry: the Albany years](#) Joseph Henry,1972    **The Arid Lands** R.
