**Fathers and Families** Henry B. Biller,1993-01-21 Biller well known for his extensive research

into the impacts of involved fathering or the absence thereof provides a comprehensive straightforward analysis of just how important paternal involvement really is. He describes the great advantages accruing to a child when the father as well as the mother actively participates in the parenting process. Fathers who sustain high interest and a true presence in a child's nurturing significantly influence body image, self esteem, moral standards, intellectual achievement, and social competency. The benefits Biller shows extend beyond the father child relationship and include heightened spousal satisfaction and a sense of overall family well being. The reciprocal influences of father, mother, and child development are considered within a lifespan biopsychosocial perspective. This is an important and compelling treatment of a topic of immense concern not only to individual families but to society as a whole. Biller by relating specific issues to fathers roles and influences offers the first integrated analysis of just how important a father's caring presence and active involvement is to his child's and spouse's psychosocial well being. This balanced study of paternal factors addresses not only such issues as nurturance, discipline, and the cultivation of self esteem, intelligence, and creativity but also family problems so evident in current society. There is a thorough analysis concerning complex connections among gender roles, parenting, and personality development. The work is highly substantive, realistic, and encouraging in its potential for guidance and offers insightful useful conclusions on paternal behavior and influences.

*Fathers Influence Child Development* Portia Silmon, 2021-04-19. This mixed method study examined parents' experiences of their children's influence on parent's continuing adult development. A father's guide of how to help daughters navigate life's early challenges including boys and survive.

Conceptualizing and Measuring Father Involvement Randal D. Day, Michael E. Lamb, 2003-10-03. After decades of focusing on the mother's role in parenting, family studies researchers have turned their attention to the role of the father in parenting and family development. The results shed new light on childhood development and question conventional wisdom by showing that beyond providing the more traditional economic support of the family, fathers do indeed matter when it comes to raising a child. Stemming from a series of workshops and publications sponsored by the Family and Child Well Being Network under the federal fatherhood initiative of the National Institute of Child Health and Development, this comprehensive volume focuses on ways of measuring the efficacy of father involvement in different scenarios using different methods of assessment and different populations. In the process, new research strategies and new parental paradigms have been formulated to include paternal involvement.

Moreover, this volume contains articles from a variety of influences while addressing the task of finding the missing pieces of the fatherhood construct that would work for new age as well as traditional and minority fathers. The scope of this discussion offers topics of interest to basic researchers as well as public policy analysts.
