[The Random Projection Method](#) Santosh S. Vempala, [The Random Projection Method](#) Santosh Srinivas Vempala,2004

Random projection is a simple geometric technique for reducing the dimensionality of a set of points in Euclidean space while preserving pairwise distances approximately The technique plays a key role in several breakthrough developments in the field of algorithms In other cases it provides elegant alternative proofs The book begins with an elementary description of the technique and its basic properties Then it develops the method in the context of applications which are divided into three groups The first group consists of combinatorial optimization problems such as maxcut graph colo **Pattern Recognition Applications and Methods** Maria De Marsico,Gabriella Sanniti di Baja,Ana Fred,2018-06-15 This book contains revised and extended versions of selected papers from the 6th International Conference on Pattern Recognition ICPRAM 2017 held in Porto Portugal in February 2017 The 13 full papers presented were carefully reviewed and selected from 139 initial submissions They aim at making visible and understandable the relevant trends of current research on pattern recognition

Science: Image In Action - Proceedings Of

The 7th International Workshop On Data Analysis In Astronomy "Livio Scarsi And Vito Digesu" Bertrand

Zavidovique,Giosue Lo Bosco,2011-12-08 The book gathers articles that were exposed during the seventh edition of the Workshop Data Analysis in Astronomy It illustrates a current trend to search for common expressions or models transcending usual disciplines possibly associated with some lack in the Mathematics required to model complex systems In that data

analysis would be at the epicentre and a key facilitator of some current integrative phase of Science It is all devoted to the question of representation in Science whence its name IMAGe IN ACTION and main thrusts Such a classification makes concepts as complexity or dynamics appear like transverse notions a measure among others or a dimensional feature among others Part A broadly discusses a dialogue between experiments and information be information extracted from or brought to experiments The concept is fundamental in statistics and tailors to the emergence of collective behaviours Communication then asks for uncertainty considerations noise indeterminacy or approximation and its wider impact on the couple perception action Clustering being all about uncertainty handling data set representation appears not to be the only solution Introducing hierarchies with adapted metrics a priori pre improving the data resolution are other methods in need of evaluation The technology together with increasing semantics enables to involve synthetic data as simulation results for the multiplication of sources Part B plays with another couple important for complex systems state vs transition State first descriptions would characterize physics while transition first would fit biology That could stem from life producing dynamical systems in essence Uncertainty joining causality here geometry can bring answers stable patterns in the state space involve constraints from some dynamics consistency Stable patterns of activity characterize biological systems too In the living world the complexity i.e a global measure on both states and transitions increases with consciousness this might be a principle of evolution Beside geometry or measures operators and topology have supporters for reporting on dynamical systems Eventually targeting universality the category theory of topological thermodynamics is proposed as a foundation of dynamical system understanding Part C details examples of actual data system relations in regards to explicit applications and experiments It shows how pure computer display and animation techniques link models and representations to reality in some concrete virtual manner Such techniques are inspired from artificial life with no connection to physical biological or physiological phenomena The Virtual Observatory is the second illustration of the evidence that simulation helps Science not only in giving access to more flexible parameter variability but also due to the associated data and method storing capabilities It fosters interoperability statistics on bulky corpuses efficient data mining possibly through the web etc in short a reuse of resources in general including novel ideas and competencies Other examples deal more classically with inverse modelling and reconstruction involving Bayesian techniques or chaos but also fractal and symmetry

Alice and Bob Meet Banach

Guillaume Aubrun, Stanisław J. Szarek, 2017-08-30 The quest to build a quantum computer is arguably one of the major scientific and technological challenges of the twenty first century and quantum information theory QIT provides the mathematical framework for that quest Over the last dozen or so years it has become clear that quantum information theory is closely linked to geometric functional analysis Banach space theory operator spaces high dimensional probability a field also known as asymptotic geometric analysis AGA In a nutshell asymptotic geometric analysis investigates quantitative properties of convex sets or other geometric structures and their approximate symmetries as the dimension becomes large

This makes it especially relevant to quantum theory where systems consisting of just a few particles naturally lead to models whose dimension is in the thousands or even in the billions Alice and Bob Meet Banach is aimed at multiple audiences connected through their interest in the interface of QIT and AGA at quantum information researchers who want to learn AGA or apply its tools at mathematicians interested in learning QIT or at least the part of QIT that is relevant to functional analysis convex geometry random matrix theory and related areas and at beginning researchers in either field Moreover this user friendly book contains numerous tables and explicit estimates with reasonable constants when possible which make it a useful reference even for established mathematicians generally familiar with the subject Clusters, Orders, and Trees: Methods and Applications Fuad Aleskerov,Boris Goldengorin,Panos M.
