The Rff Reader In Environmental And Resource Policy:

The RFF Reader in Environmental and Resource Policy Wallace E. Oates, 2006-01-04 Many articles in the Reader were originally published in RFF's quarterly magazine Resources. Wally Oates has supplemented that with material drawn from other RFF works including issue briefs and special reports. The readings provide concise insightful background and perspectives on a broad range of environmental issues including benefit cost analysis, environmental regulation, hazardous and toxic waste, environmental equity, and the environmental challenges in developing nations and transitional economies. Natural resource topics include resource management, biodiversity, and sustainable agriculture. The articles address many of today's most difficult public policy questions such as environmental policy and economic growth and When is a Life Too Costly to Save. New to the second edition is an expanded set of readings on global climate change and sustainability plus cutting edge policy applications on topics like the environment and public health and the growing problem of antibiotic and pesticide resistance. For general readers, the RFF Reader has been an accessible nontechnical authoritative introduction to key issues in environmental and natural resources policy. It has been especially effective in demonstrating the contribution that economics and other social science research can make toward improving public debate and decisionmaking. Organized to follow the contents of popular textbooks in environmental economics and politics, it has also found wide use in beginning environmental policy courses.

,2005 **Social Capital, Technology Diffusion, and Sustainable Growth in the Developing World** David A. Robalino, 2000 One of the topics that has emerged during the last decade in the policy agenda of national governments and international organizations is the design of policies that seek long term economic growth while improving and sustaining the environment The analysis of this type of policies is usually based on macroeconomic models which link changes in policy instruments e g fiscal policy pollution taxes carbon permits energy subsidies to some outcome measure such as aggregate output or consumption Critical assumptions within these models are related to the dynamics of technology related variables such as total factor productivity or the carbon intensity of the economy Usually these dynamics are defined exogenously or endogenized by formalizing the effects of changes in input prices or R D investments Nonetheless the micro process of technology adoption where decentralized heterogeneous economic agents interact and share information about the dynamics of the economy and the characteristics of new technologies has been always ignored Yet it is this process which is behind the diffusion of new technologies and ultimately the dynamics of macro variables such as the carbon intensity of the economy
