SYNC Steven H. Strogatz, 2003-03-05 At the heart of the universe is a steady insistent beat the sound of cycles in sync Along the tidal rivers of Malaysia thousands of fireflies congregate and flash in unison the moon spins in perfect resonance with its orbit around the earth our hearts depend on the synchronous firing of ten thousand pacemaker cells While the forces that synchronize the flashing of fireflies may seem to have nothing to do with our heart cells there is in fact a deep connection Synchrony is a science in its infancy and Strogatz is a pioneer in this new frontier in which mathematicians and physicists attempt to pinpoint just how spontaneous order emerges from chaos From underground caves in Texas where a French scientist spent six months alone tracking his sleep wake cycle to the home of a Dutch physicist who in 1665 discovered two of his pendulum clocks swinging in perfect time this fascinating book spans disciplines continents and centuries Engagingly written for readers of books such as Chaos and The Elegant Universe Sync is a tour de force of nonfiction writing

Feelings are Always Local Joke Brouwer, 2004 Interactive art organizes itself as an open system it preserves its coherence by exchanging matter energy and information with the environment In that manner interactive art is art whose state of rest must be disturbed before it can become art at all Yet it is precisely this instability makes it ever more complex Feelings are Always Local is published on the occasion of DEAF04 the Dutch Electronic Arts Festival which focuses on interactivity as open system and interactivity in open systems It features projects with a social and political slant as well as projects that have a technological or biological character Also included are essays interviews and projects by DEAF04 international theorists and artists

Sync Steven H. Strogatz, 2004-04-14 The tendency to synchronize may be the most mysterious and pervasive drive in all of nature It has intrigued some of the most brilliant minds of the 20th century including Albert Einstein Richard Feynman Norbert Wiener Brian Josephson and Arthur Winfree At once elegant and riveting Sync tells the story of the dawn of a new science Steven Strogatz a leading mathematician in the fields of chaos and complexity theory explains how enormous systems can synchronize themselves from the electrons in a superconductor to the pacemaker cells in

our hearts He shows that although these phenomena might seem unrelated on the surface at a deeper level there is a connection forged by the unifying power of mathematics

Spiritual Insights From The New Science: Complex Systems And Life Raima Larter, 2021-05-05 Spiritual Insights from the New Science is a guide to the deep spiritual wisdom drawn from one of the newest areas of science the study of complex systems The author a former research scientist with over three decades of experience in the field of complexity science tells her story of being attracted as a young student to the study of self organizing systems where she encountered the strange and beautiful topics of chaos fractals and other concepts that comprise complexity science Using the events of her life she describes lessons drawn from this science that provide insights into not only her own life but all our lives These insights show us how to weather the often disruptive events we all experience when growing and changing The book goes on to explore through the unfolding story of the author's life as a practicing scientist other key concepts from the science of complex systems cycles and rhythms attractors and bifurcations chaos fractals self organization and emergence Examples drawn from religious rituals dance philosophical teachings mysticism native American spirituality and other sources are used to illustrate how these scientific insights apply to all aspects of life especially the spiritual Spiritual Insights from the New Science shows the links between this new science and our human spirituality and presents in engaging accessible language the argument that the study of nature can lead to a better understanding of the deepest meaning of our lives

Theory of Energy Harmony Stanislav Tregub, 2020-08-08 Current mainstream theories of physics the Standard Model of particle physics and the General Theory of Relativity are incompatible due to the different mechanisms that they offer as explanations of fundamental energy interactions This is considered the main problem for unifying them into a theory of everything Unfortunately the problems are not limited to this issue Both theories contain arbitrary variables and constants that do not have any physical meaning and are fitted to the results of experimental tests every time the predictions fail Moreover the equations lead to infinities that are hidden by mathematical tricks to adjust the solutions to reality Many physicists consider this internal inconsistency to be a sign of the mathematical ingenuity of the models However the sad truth is that the descriptive and explanatory basis of the models is a muddle and the predictive power is zero Thus they are practically useless On top of this both postulate the existence of virtual entities responsible for observable physical interactions This means that the models have become metaphysical belief systems Some physicists dare to correctly call the situation the fall of theoretical physics as a science To see it rise we need an alternative path In the second volume the author continues to build the Theory of Energy Harmony based on the model of the universal mechanism proposed in the first part of the study This mechanism underlies all fundamental interactions and can be called a unifying physical principle The model does not use any virtual

ghosts or arbitrary postulated parameters It is self consistent and adequate to reality It contains only empirically verifiable assumptions and predictions This is a paradigm shift that takes us back to physics **New Analysis and Modeling**

Directions in Social Interaction Science Sophie C. F. Hendrikse, Jan Treur, Sander L. Koole, 2026-01-01 There is much scientific literature on multimodal social interaction between human and or virtual agents and related multimodal synchrony analysis and behavioural adaptivity within the interaction such as affiliation and bonding However due to its strongly cyclical character complexity and adaptivity mathematical formalisation and computational simulation of it is a nontrivial topic Moreover the subjective agent oriented perspective on synchrony analysis has not yet received much attention in the literature This book provides from an agent oriented perspective an overview of recent work on mathematical formalisation and computational simulation of multimodal interaction subjective multimodal synchrony analysis and related behavioural adaptivity underlying for example affiliation liking and bonding It does so by exploiting the possibilities of multi time scale multi adaptive multi level self modeling network models for agents to analyse and model these dynamic and adaptive processes formally In this way it contributes to the development of a solid basis for social interaction science Complexity

Science: An Introduction Mark A Peletier, Rutger A Van Santen, Erik Steur, 2019-03-20 This book on complexity science comprises a collection of chapters on methods and principles from a wide variety of disciplinary fields from physics and chemistry to biology and the social sciences In this two part volume the first part is a collection of chapters introducing different aspects in a coherent fashion and providing a common basis and the founding principles of the different complexity science approaches the next provides deeper discussions of the different methods of use in complexity science with interesting illustrative applications The fundamental topics deal with self organization pattern formation forecasting uncertainties synchronization and revolutionary change self adapting and self correcting systems and complex networks Examples are taken from biology chemistry engineering epidemiology robotics economics sociology and neurology

Network Science National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Network Science for Future Army Applications, 2005-12-15 The military is currently attempting to develop itself into a force capable of networkcentric operations While this effort has highlighted the military's dependence on interacting networks it has also shown that there is a huge gap between what we need to know about networks and our fundamental knowledge about network behavior This gap makes the military vision of NCO problematic To help address this problem the Army asked the NRC to find out whether identifying and funding a new field of network science could help close this gap This report presents an examination of networks and the military an analysis of the promise content and challenges of network science and an assessment of approaches to creating value from network science *Electronic Records*
