Verification Methodology Manual for SystemVerilog Janick Bergeron, Eduard Cerny, Alan Hunter, Andy Nightingale, 2005-12-29 Functional verification remains one of the single biggest challenges in the development of complex system on chip SoC devices Despite the introduction of successive new technologies the gap between design capability and verification confidence continues to widen The biggest problem is that these diverse new technologies have led to a proliferation of verification point tools most with their own languages and methodologies Fortunately a solution is at hand SystemVerilog is a unified language that serves both design and verification engineers by including RTL design constructs assertions and a rich set of verification constructs SystemVerilog is an industry standard that is well supported by a wide range of verification tools and platforms A single language fosters the development

of a unified simulation based verification tool or platform Consolidation of point tools into a unified platform and convergence to a unified language enable the development of a unified verification methodology that can be used on a wide range of SoC projects ARM and Synopsys have worked together to define just such a methodology in the Verification Methodology Manual for SystemVerilog This book is based upon best verification practices by ARM Synopsys and their customers Verification Methodology Manual for SystemVerilog is a blueprint for verification success guiding SoC teams in building a reusable verification environment taking full advantage of design for verification techniques constrained random stimulus generation coverage driven verification formal verification and other advanced technologies to help solve their current and future verification problems This book is appropriate for anyone involved in the design or verification of a complex chip or anyone who would like to know more about the capabilities of SystemVerilog Following the Verification Methodology Manual for SystemVerilog will give SoC development teams and project managers the confidence needed to tape out a complex design secure in the knowledge that the chip will function correctly in the real world **IEEE Circuits & Devices** ,2006
