Introduction

Many of the environmental, social and organizational issues that we face in contemporary society exhibit significant complexities: numerous interacting variables that need to be accounted for, and multiple agencies and groups who bring different perspectives and concerns to bear [1,2]. In response, it has become relatively common for people across the public, private, voluntary, and community sectors to call for a systems approach. The desire is for a “bigger picture” understanding, both of complex, non-linear interactions and the dynamics of multiple stakeholder relationships and perspectives. Those calling for a systems approach hope that glimpsing the bigger picture will help them, not only to take appropriate action, but also to anticipate possible negative side-effects of intervention. The aim of a systems approach is to design new ways forward that pay greater attention to the systemic complexities of the context than more narrowly focused social policy and management science methodologies [3–5].

To address the call for a systems approach, I offer a “*syssemeic intervention*” methodology [6]. It explores the complexity of the situation and the different purposes that stakeholders bring into it. This exploration includes a consideration of different possible boundaries and values (what matters in relation to the purposes being pursued in a particular context of action) that are relevant to understanding the situation and designing systemic improvements, and it looks out for processes of conflict and marginalization that might need to be addressed. It also offers a theory and practice of creatively mixing methods from a diverse range of methodological sources in response to the initial exploration. This creative mixing of methods yields a much more flexible and responsive approach than might be possible with just a few tools from a single source.

Like all the other systems methodologies in this *Handbook*, the first emergence of systemic intervention [6–8] had a historical context. This chapter therefore starts with a brief explanation of the most relevant challenges and debates that I was responding to when I first proposed it. Then I explain how systemic intervention is grounded in a new approach to systems philosophy, which informs its methodology and practice. This methodology (particularly the exploration of boundary judgements and the creative mixing of methods) is the main focus of the chapter. Each aspect of the philosophy, theory, and methodology is illustrated with practical examples from my own interventions, undertaken with collaborators.

Working Systemically with Families Rudi Dallos, Arlene Vetere, 2018-04-24. Systemic theory offers a

valuable framework for integrating the diverse ideas found throughout the mental health arena in both theory and clinical practice. With this accessible book the authors take you on an enjoyable and coherent journey through systemic theory. They then review the body of research into family therapy and conclude with a critical review of major recent developments in theory and application. At the end of several chapters are reflexive notes containing exercises that relate to the ideas and processes found within the chapter to further develop the reader's understanding. The conclusion draws together the ideas found throughout the book with particular emphasis on the interlocking triangle of formulation, intervention and evaluation and how this will impact on systemic practice in the future. While this book will be an invaluable introduction to family systems theory and practice for clinical psychology training courses plugging a gap that the authors have identified as one of their motives for writing it, its remit runs much wider. It will prove an essential companion for any professional working in the public services whether systemically trained or not.
