GPU Programming in MATLAB Nikolaos Ploskas, Nikolaos Samaras, 2016-08-25 GPU programming in MATLAB is intended for scientists, engineers or students who develop or maintain applications in MATLAB and would like to accelerate their codes using GPU programming without losing the many benefits of MATLAB. The book starts with coverage of the Parallel Computing Toolbox and other MATLAB toolboxes for GPU computing which allow applications to be ported straightforwardly onto GPUs without extensive knowledge of GPU programming. The next part covers built in GPU enabled features of MATLAB including options to leverage GPUs across multicore or different computer systems. Finally, advanced material includes CUDA code in MATLAB and optimizing existing GPU applications. Throughout the book, examples and source codes illustrate every concept so that readers can immediately apply them to their own development. Blender 5.0 User Guide Robert K. Michael, 2025-12-08 Most new 3D artists struggle for one simple reason: the information is scattered, inconsistent and rarely explained in a way that actually builds understanding. The tools feel overwhelming, the workflows seem unclear and every tutorial teaches you something different without showing how it all fits together. This guide takes a different approach. Instead of listing features, it focuses on the real challenges beginners and intermediates face: confusing interfaces, slow renders, messy materials, broken rigs, simulation glitches and performance problems, and provides clear practical solutions for each. Every section is structured to teach you what to do, why it works and how to avoid the common mistakes that frustrate most learners. You will learn how to confidently handle modeling, texturing, animation, lighting, rendering, simulations and editing using a clean step by step path designed to build genuine skill, not just follow along habits. If you want a modern, beginner friendly and thoughtfully structured guide that removes the confusion and
