- **Abstract** — This study examined the effects of a 12-week, 1000 kcal energy deficit diet on the body composition and metabolic profile of 10 obese women. The subjects were randomly assigned to either a low-carbohydrate (LC) or low-fat (LF) diet. Both groups lost weight and body fat, but the LC group lost significantly more weight and body fat than the LF group. The LC group also had a significantly greater decrease in total cholesterol and triglycerides compared to the LF group. The results suggest that a 12-week, 1000 kcal energy deficit diet can lead to significant weight and body fat loss, and a greater reduction in total cholesterol and triglycerides compared to a low-fat diet.
