Value Stream Mapping for Lean Development Drew A. Locher, 2008-05-02 Written by one of the world's most respected consultants on Lean this work presents a methodology for value stream mapping that is appropriate for any organization whether it be service or product oriented. Over the past 25 years Locher has proven just how powerful this process is having employed it in healthcare transportation distribution education financial services and manufacturing environments. Illustrating his methodology through the example of the imaginary DevelopTek company he explains how to Identify development waste Assess an organization's current state and develop a Current State Map Apply Lean principles to create a Future State Map

Value Stream Design Klaus Erlach, 2012-09-05 Value stream design is increasingly asserting itself as the key approach for production optimization but there has never been a detailed and systematic presentation of the value stream method before a gap that has now been filled by this book. The author provides an easily comprehensible code of practice for the effective analysis of production processes product family oriented factory structuring and the target oriented development of an ideal future state of production. The book plausibly conveys ten design guidelines for production optimization with corresponding equations descriptive illustrations and industrial examples well proven in numerous industrial projects. It addresses the professional public practitioners wishing to avoid waste and systematically improve their factories value streams and students tomorrow's practitioners. In contrast to other publications this book complements the value stream analysis and its unique compact visualization of the entire production process by a detailed illustration of the information flow and a comprehensive discussion of the operator balance chart. The traditional concept of value stream design is significantly expanded with a view to its applicability in complex productions by way of methodological innovation and further development concerning campaign formation value stream management and technological process integration. The method is embedded in a comprehensive procedural approach for factory planning starting with the definition of the desired lean production goals

Planning of Eco-efficient Process Chains for Automotive Component Manufacturing Christopher Schmidt, 2021-01-04 This book includes the introduction of emerging manufacturing technologies and planning cases with established technologies. The planning of eco efficient process chains is crucial for manufacturing companies. However, in the state of the art planning, various barriers exist towards the integration of the environmental dimension. Against this background, a concept for the integration of classic lean and environmental criteria into the three planning phases of process chains is presented. During concept planning, the Technology Assessment Tool supports planners in the identification of eco efficient technologies. During rough planning, the Value Stream Design Tool enables the derivation of a production line based on workpiece characteristics. For detailed planning, tools for eco efficient machine and process chain configuration are provided. Three case studies from large scale automotive component manufacturing with established and emerging technologies demonstrate the tool applicability.

Engineering and Management of Data Science, Analytics, and AI/ML Projects Manuel Mora, **Enabling Manufacturing Competitiveness and Economic Sustainability** Hoda A. Value Stream Analysis and Mapping for Product Development Richard Luke Millard, 2001-05-01 This thesis explores of Value Stream Analysis and Mapping VSA M as applied to Product Development PD efforts It contains three parts the background and history of PD VSA M a report of the current PD VSA M practices within the U S aerospace industry and the proposal of a general VSA M method for Product Development activities Value Stream Analysis and Mapping is a method used for business process and product improvement which originated with the development of the Lean business philosophy The VSA M background section includes a brief history of the method as described in foundational Lean literature As with Lean practices in general the application of VSA M began in the manufacturing community and has seen excellent results However the engineering and design efforts of Product Development provide a unique setting for the use of VSA M The report of current

PD VSA M practices within the U S aerospace industry focuses on the research results taken from site visits to nine major Product Development sites The VSA M tools used at the sites are characterized and ranked in sophistication The business context surrounding the use of the tools is also characterized and ranked The reduction of the research data and this analysis shows the importance of both tool sophistication and the surrounding context in the success of a PD VSA M exercise The proposal of a general VSA M method for Product Development activities includes an outline for implementation This outline is supported with a discussion of associated principles and the application of selected tools The proposed method follows a pattern of analyzing and mapping the Current State of a process and using heuristics to analyze and map an improved Future State The tools used to accomplish this analysis and mapping include 1 a high level Gantt chart or Ward LEI map 2 a detailed level Process Flow map and 3 a detailed level Design Structure Matrix

Untangling with Value Stream Mapping Ovidiu

Contras,2022-04-05 The standard belief in books about Lean initiatives and value stream mapping VSM is that VSM works well on transactional processes which are primarily linear processes where handoffs are well defined and the outcome is known and it is useful for repetitive projects or products This book counters these statements by clearly demonstrating how a VSM exercise can be successfully performed in complex multifunctional environments involving nonrepetitive work such as aircraft new product development custom engineering software development and project management The methodology described in this book is the result of more than ten years of refinement and is based on practice while working with multidisciplinary teams and helping them achieve their goals This is a novel approach to capturing the information flow in a VSM by recognizing it as the place where most of the issues are generated especially for the previously mentioned environments and the fact that classical mapping methodologies including classical VSM do not capture it well The VSM methodology that the author developed goes to the essence of a VSM activities flow information flow timeline uses conventional VSM icons and some custom information flow icons and helps the following Quantifying waste VSM literature gap Making disconnects visible VSM literature gap Making behavioral and cultural patterns visible VSM literature gap If the steps are followed thoroughly then lead time reductions ranging from 60% to 88% are achieved along with increased availability of resources more output with the same resources projects delivered on time and most importantly colleagues embracing the Lean mindset which greatly contributes to maintaining the gains Essentially this book helps readers perform a VSM in environments where multiple stakeholders interact with each other to deliver a product or a service with unclear aspects such as what the product service is how all involved can contribute to the product or service transformation and how the interactions between them occur For example the products services targeted in this book include test results analysis results a custom design a process a methodology an engineering change integrated enterprise software and engineering drawings Concurrently this book helps readers map behavioral patterns such as micromanagement and company culture aspects such as excessive governance and decisions by committee
