Learn Generative AI with PyTorch Mark Liu,2025-01-28 Learn how generative AI works by building your very own models that can write coherent text create realistic images and even make lifelike music Learn Generative AI with PyTorch teaches the underlying mechanics of generative AI by building working AI models from scratch Throughout you ll use the

intuitive PyTorch framework that's instantly familiar to anyone who's worked with Python data tools. Along the way you'll master the fundamentals of General Adversarial Networks, GANs, Transformers, Large Language Models, LLMs, variational autoencoders, diffusion models, LangChain, and more. In "Learn Generative AI with PyTorch" you'll build these amazing models: A simple English to French translator, A text generating model as powerful as GPT-2, A diffusion model that produces realistic flower images, Music generators using GANs and Transformers, An image style transfer model, A zero-shot knowledge agent. The generative AI projects you create use the same underlying techniques and technologies as full-scale models like GPT-4 and Stable Diffusion. You don't need to be a machine learning expert; you can get started with just some basic Python programming skills. About the technology: Transformers, Generative Adversarial Networks, GANs, diffusion models, LLMs, and other powerful deep learning patterns have radically changed the way we manipulate text, images, and sound. Generative AI may seem like magic at first, but with a little Python and the PyTorch framework, and some practice, you can build interesting and useful models that will train and run on your laptop. This book shows you how.

About the book: "Learn Generative AI with PyTorch" introduces the underlying mechanics of generative AI by helping you build your own working AI models. You'll begin by creating simple images using a GAN and then progress to writing a language translation transformer line by line. As you work through the fun and fascinating projects, you'll train models to create anime images, write like Hemingway, make music like Mozart, and more. You just need Python and a few machine learning basics to get started. You'll learn the rest as you go.

What's inside: Build an English to French translator, Create a text generation LLM, Train a diffusion model to produce high-resolution images, Music generators using GANs and Transformers.

About the reader: Examples use simple Python. No deep learning experience required.

About the author: Mark Liu is the founding director of the Master of Science in Finance program at the University of Kentucky. The technical editor on this book was Emmanuel Maggiori.

Large Language Models Projects Pere Martra, 2024-09-18

This book offers you a hands-on experience using models from OpenAI and the Hugging Face library. You will use various tools and work on small projects gradually applying the new knowledge you gain. The book is divided into three parts: Part one covers techniques and libraries. Here you'll explore different techniques through small examples, preparing to build projects in the next section. You'll learn to use common libraries in the world of Large Language Models. Topics and technologies covered include chatbots, code generation, OpenAI API, Hugging Face vector databases, LangChain, fine tuning, PEFT, fine tuning, soft prompt tuning, LoRA, QLoRA, evaluating models, and Direct Preference Optimization. Part two focuses on projects. You'll create projects understanding design decisions. Each project may have more than one possible implementation, as there is often not just one good solution. You'll also explore LLMOps related topics. Part three delves into enterprise solutions. Large Language Models are not a standalone solution in large corporate environments; they are one piece of the puzzle. You'll explore how to structure solutions capable of transforming organizations with thousands of employees, highlighting the main role that Large Language Models play in these new solutions. This book equips

you to confidently navigate and implement Large Language Models empowering you to tackle diverse challenges in the evolving landscape of language processing. What You Will Learn Gain practical experience by working with models from OpenAI and the Hugging Face library. Use essential libraries relevant to Large Language Models covering topics such as Chatbots, Code Generation, OpenAI API, Hugging Face and Vector databases. Create and implement projects using LLM while understanding the design decisions involved. Understand the role of Large Language Models in larger corporate settings. Who This Book Is For Data analysts, data science, Python developers and software professionals interested in learning the foundations of NLP, LLMs and the processes of building modern LLM applications for various tasks.

Prompt Engineering
Ajantha Devi Vairamani, Anand Nayyar, 2024-12-02

Prompt engineering engages as a transformative approach to enhancing interaction, creativity and innovation. From business and healthcare to education, law and beyond, prompt engineering is a versatile toolkit for navigating complex challenges and driving meaningful change. This book delves into the intricacies of prompt engineering, providing insights, techniques and practical examples for leveraging prompts effectively. It explores the evolution of prompt engineering from its early antecedents to its contemporary applications with advanced language models like ChatGPT. Readers will discover how prompts can enhance communication, foster creativity, facilitate problem solving and empower professionals across diverse domains. This book is your gateway to unlocking the full potential of prompt engineering. Join the journey of discovery and innovation as the book harnesses the power of prompts to shape a brighter future.

Hands-On Artificial Intelligence for IoT Amita Kapoor, 2019-01-31

Build smarter systems by combining artificial intelligence and the Internet of Things, two of the most talked about topics today. Key Features: Leverage the power of Python libraries such as TensorFlow and Keras to work with real time IoT data. Process IoT data and predict outcomes in real time to build smart IoT models. Cover practical case studies on industrial IoT, smart cities and home automation.

Book Description: There are many applications that use data science and analytics to gain insights from terabytes of data. These apps, however, do not address the challenge of continually discovering patterns for IoT data. In *Hands On Artificial Intelligence for IoT*, we cover various aspects of artificial intelligence (AI) and its implementation to make your IoT solutions smarter. This book starts by covering the process of gathering and preprocessing IoT data gathered from distributed sources. You will learn different AI techniques such as machine learning, deep learning, reinforcement learning and natural language processing to build smart IoT systems. You will also leverage the power of AI to handle real time data coming from wearable devices. As you progress through the book, techniques for building models that work with different kinds of data generated and consumed by IoT devices such as time series, images and audio will be covered. Useful case studies on four major application areas of IoT solutions are a key focal point of this book. In the concluding chapters, you will leverage the power of widely used Python libraries, TensorFlow and Keras, to build different kinds of smart AI models. By the end of this book, you will be able to build smart AI powered IoT apps with confidence. What you will learn: Apply different AI techniques including machine learning and
