Hybrid mismatch arrangements, CFC rules, transfer pricing rules. Limiting Base Erosion the general topic for the master theses of the part time LL M program 2015-2017 has been one of the most controversial topics in international tax law ever since the initiation of the OECD BEPS Project in 2013. Even though the final reports of the 15 BEPS Actions were released by the OECD in as early as October 2015 the question how to effectively target base erosion practices still has not lost any of its topicality. Following the efforts of the OECD in developing a new international tax environment the focus of attention has now partly shifted to the OECD Member countries that have to properly implement the OECD recommendations in their domestic laws as well as in their tax treaty practice. In this respect a comprehensive analysis in the literature of all the issues related to base erosion proves to be of the utmost importance in order to provide practical guidance to the Member countries during that the process of implementation. This book deals especially with four key areas of interest: Limiting base erosion by neutralizing the effects of hybrid mismatch arrangements; Limiting base erosion by strengthening CFC rules; Measures against base erosion via interest deductions and other financial payments; Limiting base erosion by improving transfer pricing rules. On that basis 27 concrete topics were chosen in order to address the four key areas of interest from different viewpoints. Base erosion and the challenges they present read more in **Limiting Base Erosion**.
