Gehl, 2025 Move Slowly and Build Bridges tells the story of activists, software developers, artists, and everyday people who have built the fediverse, a large, decentralized alternative social media system. In contrast to big tech corporations like Meta, TikTok, or X, the fediverse is comprised of thousands of small, independent communities who use a powerful internet protocol to communicate with one another. These small communities can govern themselves and moderate content at the human scale, in stark contrast to the global and advertiser-friendly interests of Meta or X. The Mastodon network is perhaps the most notable and successful platform in the fediverse. Founded in 2016, Mastodon has positioned itself as an alternative to Twitter, one that can be completely under the control of its members from its daily operations to its underlying software. Making a decentralized, ethically run social media system is no easy task. The people building the fediverse have faced burnout, bigotry, angry debates, and death threats. And they face constant nagging doubts: can we really do this? Can decentralized social media survive? Can we all of us have our own social media? In this thoroughly researched book, Robert W. Gehl argues that the answer is yes, but it won't be easy.

The History and Description of Leeds Castle, Kent Charles Wykeham-Martin, 1869 **Open Quantum Systems in Biology, Cognitive and Social Sciences** Andrei Y. Khrennikov, 2023-06-03 This book mathematically analyzes the basic problems of biology, decision making, and psychology within the framework of the theory of open quantum systems. In recent years, there has been an explosion of interest in applications of quantum theory in fields beyond physics. The main areas include psychology, decision making, economics, finance, social science, as well as genetics and molecular biology. The corresponding models are referred to as quantum-like, as they don't concern any genuine physical processes in the human brain.

Quantum like models reflect the special features of information processing in biological cognitive and social systems which match well with the quantum formalism. This formalism gives rise to the quantum probability model QP which differs essentially from Kolmogorov's classical probability model QP. It also serves as the basis for quantum information theory. Recently QP has been widely applied to the resolution of the basic paradoxes of decision making theory and to modeling experimental data stemming from cognition, psychology, economics and finance, thereby shedding light on probability fallacies and irrational behavior. In this book the theory of quantum instruments and the quantum master equation are applied to the modeling of biological and cognitive processes, in particular to the stability of complex biological and social systems interacting with their environment. An essential part of the book is devoted to the theory of the social laser and the Frenkel condensate.
