ChatGPT is an artificial intelligence chatbot developed by OpenAI. It can be used in a variety of applications including content creation, personalized recommendations, copy creation, and language translation. In business, it can be used for data analysis, provide recommendations, and even process orders. Its benefits have been discussed widely in popular media with several articles focusing on the changes it will bring to the workforce and the way we live and work broadly. In this article, we discuss the benefits and limitations of ChatGPT in business, education, and research, with a particular focus on the areas of management science, operations management, and data analytics. We provide an extensive systematic review of its capabilities and hope that both professors and students use it as a helpful guide to return to frequently. For professors, it can design courses, create syllabi, and content including lecture slides and assignments, help with grading, and with student understanding. For students, it can explain complex concepts, create and debug code, and create sample exam questions. Overall, we find that writing and debugging code and grading are the greatest strengths of ChatGPT for educational and research purposes. However, it has limitations, including that it often makes errors and requires a deeper or an advanced knowledge of the domain. Finally, the discussion of ChatGPT in business, education, and research also raises problems regarding bias and plagiarism.

The Growing Pains of ChatGPT Madeline Rae, 2023. This short case reviews the latest efforts from major tech companies, including Microsoft, to release chatbots using ChatGPT or OpenAI technology. These releases have not been smooth and have revealed vulnerabilities within this tech, with early users reporting perplexing and worrisome responses. Students are asked to discuss this technology, its drawbacks, and its potential business use.
