## **The Geometry Of Algebraic Cycles Clay Mathematics Proceedings:**

The Geometry of Algebraic Cycles Reza Akhtar, Patrick Brosnan, Roy Joshua, 2010 The subject of algebraic cycles has its roots in the study of divisors extending as far back as the nineteenth century Since then and in particular in recent years algebraic cycles have made a significant impact on many fields of mathematics among them number theory algebraic geometry and mathematical physics The present volume contains articles on all of the above aspects of algebraic cycles It also contains a mixture of both research papers and expository articles so that it would be of interest to both experts and beginners in the field *Hodge Theory, Complex Geometry, and Representation Theory* Robert S. Doran, Greg Friedman, Scott Nollet, 2014 This volume contains the proceedings of an NSF Conference Board of the Mathematical Sciences CBMS regional conference on Hodge theory complex geometry and representation theory held on June 18 2012 at the Texas Christian University in Fort Worth TX Phillip Griffiths of the Institute for Advanced Study gave 10 lectures describing now classical work concerning how the structure of Shimura varieties as quotients of Mumford Tate domains by arithmetic groups had been used to understand the relationship between Galois representations and automorphic forms He then discussed recent breakthroughs of Carayol that provide the possibility of extending these results beyond the classical case His lectures will appear as an independent volume in the CBMS series published by the AMS This volume which is dedicated to Phillip Griffiths contains carefully written expository and research articles Expository papers include discussions of Noether Lefschetz theory algebraicity of Hodge loci and the representation theory of  $SL_2$  Research articles concern the Hodge conjecture Harish Chandra modules mirror symmetry Hodge representations of  $Q$  algebraic groups and compactifications distributions and quotients of period domains It is expected that the book will be of interest primarily to research mathematicians physicists and upper level graduate students **Homotopy Theory and Arithmetic Geometry - Motivic and Diophantine Aspects** Frank Neumann, Ambrus Pál, 2021-09-29 This book provides an introduction to state of the art applications of homotopy theory to arithmetic geometry The contributions to this volume are based on original lectures by leading researchers at the LMS CMI Research School on Homotopy Theory and Arithmetic Geometry Motivic and Diophantine Aspects and the Nelder Fellow Lecturer Series which both took place at Imperial College London in the summer of 2018 The contribution by Brazelton based on the lectures by Wickelgren provides an introduction to arithmetic enumerative geometry the notes of Cisinski present motivic sheaves and new cohomological methods for intersection theory and Schlank's contribution gives an overview of the use of tame homotopy theory for obstructions to the existence of rational points on algebraic varieties Finally the article by Asok and Sturmfels based in part on the Nelder Fellow lecture series by Sturmfels gives a survey of the interplay between motivic homotopy theory and affine algebraic geometry with a focus on contractible algebraic varieties Now a major trend in arithmetic geometry this volume offers a detailed guide to the fascinating circle of recent applications of homotopy theory to number theory It will be invaluable to research students entering the field as well

as postdoctoral and more established researchers

### **Geometry, Algebra, Number Theory, and Their Information**

**Technology Applications** Amir Akbary, Sanoli Gun, 2018-09-18 This volume contains proceedings of two conferences held in Toronto Canada and Kozhikode India in 2016 in honor of the 60th birthday of Professor Kumar Murty. The meetings were focused on several aspects of number theory: The theory of automorphic forms and their associated L functions; Arithmetic geometry with special emphasis on algebraic cycles; Shimura varieties and explicit methods in the theory of abelian varieties. The emerging applications of number theory in information technology. Kumar Murty has been a substantial influence in these topics and the two conferences were aimed at honoring his many contributions to number theory, arithmetic geometry and information technology.

### **Arithmetic and Geometry of K3 Surfaces and Calabi-Yau Threefolds**

Radu Laza, Matthias Schütt, Noriko Yui, 2013-06-12 In recent years research in K3 surfaces and Calabi Yau varieties has seen spectacular progress from both arithmetic and geometric points of view which in turn continues to have a huge influence and impact in theoretical physics in particular in string theory. The workshop on Arithmetic and Geometry of K3 surfaces and Calabi Yau threefolds held at the Fields Institute August 16-25 2011 aimed to give a state of the art survey of these new developments. This proceedings volume includes a representative sampling of the broad range of topics covered by the workshop. While the subjects range from arithmetic geometry through algebraic geometry and differential geometry to mathematical physics the papers are naturally related by the common theme of Calabi Yau varieties. With the big variety of branches of mathematics and mathematical physics touched upon this area reveals many deep connections between subjects previously considered unrelated. Unlike most other conferences the 2011 Calabi Yau workshop started with 3 days of introductory lectures. A selection of 4 of these lectures is included in this volume. These lectures can be used as a starting point for the graduate students and other junior researchers or as a guide to the subject.

*Nonarchimedean and Tropical Geometry* Matthew Baker, Sam Payne, 2016-08-18 This volume grew out of two Simons Symposia on Nonarchimedean and tropical geometry which took place on the island of St John in April 2013 and in Puerto Rico in February 2015. Each meeting gathered a small group of experts working near the interface between tropical geometry and nonarchimedean analytic spaces for a series of inspiring and provocative lectures on cutting edge research interspersed with lively discussions and collaborative work in small groups. The articles collected here which include high level surveys as well as original research mirror the main themes of the two Symposia. Topics covered in this volume include: Differential forms and currents and solutions of Monge-Ampère type differential equations on Berkovich spaces and their skeletons; The homotopy types of nonarchimedean analytifications; The existence of faithful tropicalizations which encode the topology and geometry of analytifications; Relations between nonarchimedean analytic spaces and algebraic geometry including logarithmic schemes; birational geometry and the geometry of algebraic curves; Extended notions of tropical varieties which relate to Huber's theory of adic spaces analogously to the way that usual tropical varieties relate to Berkovich spaces; and Relations between

nonarchimedean geometry and combinatorics including deep and fascinating connections between matroid theory tropical geometry and Hodge theory

**Regulators** José Ignacio Burgos Gil, 2012 This volume contains the proceedings of the Regulators III Conference held from July 12 to July 22 2010 in Barcelona Spain Regulators can be thought of as realizations from motivic cohomology which is very difficult to compute to more computable theories such as Hodge Betti  $l$  adic and Deligne cohomology It is a very intricate subject that thrives on its interaction with algebraic K theory arithmetic geometry number theory motivic cohomology Hodge theory and mathematical physics The articles in this volume are a reflection of the various approaches to this subject such as results on motivic cohomology descriptions of regulators a revisiting of a number of fundamental conjectures such as new results pertaining to the Hodge and standard conjectures and more

Calabi-Yau Varieties and Mirror Symmetry Noriko Yui, James Dominic Lewis, The idea of mirror symmetry originated in physics but in recent years the field of mirror symmetry has exploded onto the mathematical scene It has inspired many new developments in algebraic and arithmetic geometry toric geometry the theory of Riemann surfaces and infinite dimensional Lie algebras among others The developments in physics stimulated the interest of mathematicians in Calabi Yau varieties This led to the realization that the time is ripe for mathematicians armed with many concrete examples and alerted by the mirror symmetry phenomenon to focus on Calabi Yau varieties and to test for these special varieties some of the great outstanding conjectures e g the modularity conjecture for Calabi Yau threefolds defined over the rationals the Bloch Beilinson conjectures regulator maps of higher algebraic cycles Picard Fuchs differential equations GKZ hypergeometric systems and others The articles in this volume report on current developments The papers are divided roughly into two categories geometric methods and arithmetic methods One of the significant outcomes of the workshop is that we are finally beginning to understand the mirror symmetry phenomenon from the arithmetic point of view namely in terms of zeta functions and L series of mirror pairs of Calabi Yau threefolds The book is suitable for researchers interested in mirror symmetry and string theory

**Real Non-Abelian Mixed Hodge Structures for Quasi-Projective Varieties: Formality and Splitting** J. P. Pridham, 2016-09-06 The author defines and constructs mixed Hodge structures on real schematic homotopy types of complex quasi projective varieties giving mixed Hodge structures on their homotopy groups and pro algebraic fundamental groups The author also shows that these split on tensoring with the ring  $R_x$  equipped with the Hodge filtration given by powers of  $x$  giving new results even for simply connected varieties The mixed Hodge structures can thus be recovered from the Gysin spectral sequence of cohomology groups of local systems together with the monodromy action at the Archimedean place As the basepoint varies these structures all become real variations of mixed Hodge structure
