book benefits and reflects the author's more than 22 years of designing and working with IP routing devices and protocols and Telecoms systems in general. Every aspect of the book is written to reflect current best practices using real world examples. This book describes the various methods used by routers to learn routing information. The author includes discussion of the characteristics of the different dynamic routing protocols and how they differ in design and operation. He explains the processing steps involved in forwarding IP packets through an IP router to their destination and discusses the various mechanisms IP routers use for controlling routing in networks. The discussion is presented in a simple style to make it comprehensible and appealing to undergraduate and graduate level students, research and practicing engineers, scientists, IT personnel and network engineers. It is geared toward readers who want to understand the concepts and theory of IP routing protocols through real world example systems and networks. Focuses on the fundamental concepts of IP routing and distance vector routing protocols RIPv2 and EIGRP. Describes the various methods used by routers to learn routing information. Includes discussion of the characteristics of the different dynamic routing protocols and how they differ in design and operation. Provides detailed descriptions of the most common distance vector routing protocols RIPv2 and EIGRP. Discusses the various mechanisms IP routers use for controlling routing in networks.
