unsuited to mobile environments and it enables applications to migrate between heterogeneous hosts with little disruption Applications which use the service are written in a standard compiled language and normal running applications suffer little overhead A number of existing applications which are representative of a workstation's interactive desktop environment have been adapted to use the Notus architecture and are evaluated In summary this work describes how mobility awareness and the support from appropriate tools can enable workstation applications to better adapt to a changing mobile environment particularly when the workstation is carried between different network types or over great distances *Reverse Acronyms, Initialisms, & Abbreviations Dictionary* ,1983 **AMSTAT News** ,1993 **Electrical & Electronics Abstracts** ,1997
