## Trig Modeling Problems:

**Learning to Solve Complex Scientific Problems** David H. Jonassen, 2017-09-25 Problem solving is implicit in the very nature of all science and virtually all scientists are hired, retained and rewarded for solving problems. Although the need for skilled problem solvers has never been greater, there is a growing disconnect between the need for problem solvers and the educational capacity to prepare them. *Learning to Solve Complex Scientific Problems* is an immensely useful read offering the insights of cognitive scientists, engineers and science educators who explain methods for helping students solve the complexities of everyday scientific problems. Important features of this volume include discussions on how problems are represented by the problem solvers and how perception, attention, memory and various forms of reasoning impact the management of information and the search for solutions. How academics have applied lessons from cognitive science to better prepare students to solve complex scientific problems, gender issues in science and engineering classrooms and questions to guide future problem solving research. The innovative methods explored in this practical volume will be of significant value to science and engineering educators and researchers as well as to instructional designers.

**Mathematical Modelling for Teachers** Keng Cheng Ang, 2018-09-03 *Mathematical Modelling for Teachers: Resources, Pedagogy and Practice* provides everything that teachers and mathematics educators need to design and implement mathematical modelling activities in their classroom. Authored by an expert in Singapore, the global leader in mathematics education, it is written with an international readership in mind. This book focuses on practical classroom ideas in mathematical modelling suitable to be used by mathematics teachers at the secondary level. As they are interacting with students all the time, teachers generally have good ideas for possible mathematical modelling tasks. However, many have difficulty translating those ideas into concrete modelling activities suitable for a mathematics classroom. In this book, a framework is introduced to assist teachers in designing, planning and implementing mathematical modelling activities and its use is illustrated through the many examples included. Readers will have access to modelling activities suitable for students from lower secondary levels (Years 7 and 8 onwards) along with the underlying framework, guiding notes for teachers and suggested approaches to solve the problems. The activities are grouped according to the types of models constructed: empirical, deterministic and simulation models. Finally, the book gives the reader suggestions of different ways to assess mathematical modelling competencies in students.
