T.P.'s Weekly ,1915 Maintenance Scheduling in Restructured Power Systems M.

Shahidehpour,M. Marwali,2012-12-06 The overall goal of this book is to introduce algorithms for improving the economic posture of a utility company in a restructured power system by promoting cost effective maintenance schedules Today cutting operations and maintenance O M costs and preserving service reliability are among the top priorities for managers of utility companies Preventive maintenance is perhaps the single largest controllable cost of a utility2 operation It is perceived that a careful planning and a good coordination among self interested entities in a restructured power system are essential to achieving an optimal trade off between the cost of maintenance and the service reliability Traditional maintenance programs in vertically integrated utilities relied heavily on time directed maintenance and manufacturer recommendations This book offers a logical alternative to traditional electric utility maintenance practices and a basis for maintenance decisions The book is organized as follows Chapter I reviews various issues related to the power system operation and presents the role of restructuring in maintenance scheduling In Chapter II fundamental topics related to linear and nonlinear systems are reviewed The duality in linear programming is discussed and integer programming is reviewed Benders decomposition Lagrangian relaxation and Dantzig Wolfe decomposition are presented Several examples are given to demonstrate the applications of different methods The formulation of reactive power optimization is discussed which will be used again in Chapter VII
