**Microsoft Access/Visual Basic Step by Step** Evan Callahan,1995 The perfect book for users who want to get to the heart of Access to help them build personalized and customized Access solutions Fifteen lessons methodically teach readers in the highly successful Step By Step format how to use this built in graphical programming language to customize Access to work the way they do **The Software Encyclopedia 2000** Bowker Editorial Staff,2000-05 **Java Message Service** David Chappell,Richard Monson-Haefel,2007-06-26 This book is a thorough introduction to Java Message Service JMS the standard Java application program interface API from Sun Microsystems that supports the formal communication known as messaging between computers in a network JMS provides a common interface to standard messaging protocols and

to special messaging services in support of Java programs. The messages exchange crucial data between computers rather than between users information such as event notification and service requests. Messaging is often used to coordinate programs in dissimilar systems or written in different programming languages. Using the JMS interface a programmer can invoke the messaging services of IBM's MQSeries, Progress Software's SonicMQ and other popular messaging product vendors. In addition JMS supports messages that contain serialized Java objects and messages that contain Extensible Markup Language XML pages. Messaging is a powerful new paradigm that makes it easier to uncouple different parts of an enterprise application. Messaging clients work by sending messages to a message server which is responsible for delivering the messages to their destination. Message delivery is asynchronous meaning that the client can continue working without waiting for the message to be delivered. The contents of the message can be anything from a simple text string to a serialized Java object or an XML document. Java Message Service shows how to build applications using the point to point and publish and subscribe models, how to use features like transactions and durable subscriptions to make an application reliable and how to use messaging within Enterprise JavaBeans. It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2.0 and discusses integration of messaging into J2EE.
