Microlocal Analysis for Differential Operators Alain Grigis, Johannes Sjöstrand, 1994 This short introduction to microlocal analysis is presented in the spirit of Hörmander in the classical framework of partial differential equations This theory has important applications in areas such as harmonic and complex analysis and also in theoretical physics Here Grigis and Sjöstrand emphasize the basic tools especially the method of stationary phase and they discuss wavefront sets elliptic operators local symplectic geometry and WKB constructions

Mathematics of Complexity and Dynamical Systems Robert A. Meyers, 2011-10-05 Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self organization e g the spontaneous formation of temporal spatial or functional structures These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic The more than 100 entries in this wide ranging single source work provide a comprehensive explication of the theory and applications of mathematical complexity covering ergodic theory fractals and multifractals dynamical systems perturbation theory solitons systems and control theory and related topics Mathematics of Complexity and Dynamical Systems is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers

Gromov's Compactness Theorem for Pseudo-holomorphic Curves Christoph Hummel, 2012-12-06 Mikhail Gromov introduced pseudo holomorphic curves into symplectic geometry in 1985 Since then pseudo holomorphic curves have taken on great importance in many fields The aim of this book is to present the original proof of Gromov's compactness theorem for pseudo holomorphic curves in detail Local properties of pseudo holomorphic curves are investigated and proved from a geometric viewpoint Properties of particular interest are isoperimetric inequalities a monotonicity formula gradient bounds and the removal of singularities A special chapter is devoted to relevant features of hyperbolic surfaces where pairs of pants decomposition and thickthin decomposition are described The book is essentially self contained and should also be accessible to students with a basic knowledge of differentiable manifolds and covering spaces

Joseph Fourier 250th Birthday Frédéric Barbaresco, Jean-Pierre Gazeau, 2019-03-28 For the 250th birthday of Joseph Fourier born in 1768 in Auxerre France this MDPI Special Issue will explore modern topics related to Fourier Analysis and Heat Equation Modern developments of Fourier analysis during the 20th century have explored generalizations of Fourier and Fourier Plancherel formula for non commutative harmonic

analysis applied to locally compact non Abelian groups In parallel the theory of coherent states and wavelets has been generalized over Lie groups One should add the developments over the last 30 years of the applications of harmonic analysis to the description of the fascinating world of aperiodic structures in condensed matter physics The notions of model sets introduced by Y Meyer and of almost periodic functions have revealed themselves to be extremely fruitful in this domain of natural sciences The name of Joseph Fourier is also inseparable from the study of the mathematics of heat Modern research on heat equations explores the extension of the classical diffusion equation on Riemannian sub Riemannian manifolds and Lie groups In parallel in geometric mechanics Jean Marie Souriau interpreted the temperature vector of Planck as a space time vector obtaining in this way a phenomenological model of continuous media which presents some interesting properties One last comment concerns the fundamental contributions of Fourier analysis to quantum physics Quantum mechanics and quantum field theory The content of this Special Issue will highlight papers exploring non commutative Fourier harmonic analysis spectral properties of aperiodic order the hypoelliptic heat equation and the relativistic heat equation in the context of Information Theory and Geometric Science of Information

Annales de la faculté des sciences de Toulouse, 1997 Encyclopedia of Mathematical Physics Jean-Pierre Francoise, Gregory L. Naber, Sheung Tsun Tsou, 2006 The Encyclopedia of Mathematical Physics provides a complete resource for researchers students and lecturers with an interest in mathematical physics It

enables readers to access basic information on topics peripheral to their own areas to provide a repository of the core information in the area that can be used to refresh the researcher's own memory banks and aid teachers in directing students to entries relevant to their course work. The Encyclopedia does contain information that has been distilled, organised and presented as a complete reference tool to the user and a landmark to the body of knowledge that has accumulated in this domain. It also is a stimulus for new researchers working in mathematical physics or in areas using the methods originating from work in mathematical physics by providing them with focused, high quality background information.

New Trends in Algebraic Geometry, Klaus Hulek, 1999-05-13. This book is the outcome of the 1996 Warwick Algebraic Geometry EuroConference, containing 17 survey and research articles selected from the most outstanding contemporary research topics in algebraic geometry. Several of the articles are expository; among these, a beautiful short exposition by Paranjape of the new and very simple approach to the resolution of singularities; a detailed essay by Ito and Nakamura on the ubiquitous ADE classification centred around simple surface singularities; a discussion by Morrison of the new special Lagrangian approach to giving geometric foundations to mirror symmetry; and two deep informative surveys by Siebert and Behrend on Gromov-Witten invariants, treating them from the point of view of algebraic and symplectic geometry. The remaining articles cover a wide cross section of the most significant research topics in algebraic geometry. This includes Gromov-Witten invariants, Hodge theory, Calabi-Yau 3-folds, mirror symmetry and classification of varieties.
