**System Requirements Specification (Syrs) 2.0** Dr William S Chao, 2015-12-17 System requirements specification SyRS is in the systems development life cycle a result of the requirements and specifications phase That is a system requirements specification is for the analysts to find out what the customers indeed expect the system to do for them When working on the system requirements specification we only specify what this system is but never ask how this system shall be manufactured A system has been specified by system requirements specification SyRS 1.0 hopefully to be an integrated whole embodied in its assembled components their interactions with each other and the environment Since systems structure and systems behavior are the two most prominent views of a system integrating the systems structure and systems behavior apparently is the best way to achieve a truly integrated whole of a system Because system requirements specification 1.0 does not specify the integration of systems structure and systems behavior very likely it will never be able to actually form an integrated whole of a system Structure behavior coalescence SBC provides an elegant way to integrate the systems structure and systems behavior and hence achieves a truly integrated whole of a system A truly integrated whole sets a path to achieve the desired system requirements specification SyRS SBC facilitates an integrated whole Therefore we conclude that system requirements specification SyRS 2.0 using the SBC approach which contains three fundamental diagrams a architecture hierarchy diagram b component operation diagram and c interaction flow diagram is highly adequate in specifying a system
