**Engineering Tools and Solutions for Sustainable Transportation Planning** Knoflacher, Hermann, Ocalir-Akunal, Ebru V., 2017-02-14 While modern cities continue to grow and become more efficient in many sectors as their population increases public transportation has not yet caught up As a significant industry in contemporary society further progress in transportation systems is more vital than ever Engineering Tools and Solutions for Sustainable Transportation Planning is an informative reference source that outlines why current transportation systems have become inefficient in modern societies and offers solutions for the improvement of transportation infrastructures Highlighting key topics such as parking organization car ownership energy consumption and highway performance this is a detailed resource for all practitioners academics graduate students and researchers that are interested in studying the latest trends and developments in the transportation sector Principles of Highway Engineering and Traffic Analysis Fred L. Mannering, Walter P. Kilareski, 1990-02-01 **Roundabouts as Safe and Modern Solutions in Transport Networks and Systems** Elżbieta Macioszek, Rahmi Akçelik, Grzegorz Sierpiński, 2018-07-31 This book offers a collection of guidelines that will be particularly useful to those making decisions concerning roundabouts as safe and modern solutions in transport

networks and systems The decision making support systems described here will interest those who face the challenge of finding solutions to problems concerning modern transport systems on a daily basis Consequently the book is chiefly intended for local authorities involved in planning and preparing development strategies for specific transport related issues in both urban and regional contexts as well as for representatives of business and industry who are directly engaged in the implementation of traffic engineering solutions The guidelines provided in the respective chapters help to address the given problem soundly and to simplify the selection of an appropriate strategy The topics covered include traffic conditions and the performance of single lane two lane and turbo roundabouts road traffic safety analysis analysis of road traffic safety improvements surrogate safety measures at roundabouts analysis of pedestrian behavior at pedestrian crossings with public transport vehicles methods for assessing vehicle motion trajectory at single lane roundabouts using visual techniques making compact two lane roundabouts effective for vulnerable road users concepts for wireless electric vehicle charging near roundabouts work zones and temporary traffic control at roundabouts Since the book also considers new approaches to theoretical models including modeling roundabout capacity models of critical gaps and follow up headways for turbo roundabouts and estimating roundabout delay while taking into account pedestrian impact it will also appeal to researchers and scientists studying these problems The book gathers selected papers presented at the 15th Scientific and Technical Conference Transport Systems Theory and Practice organized by the Department of Transport Systems and Traffic Engineering Silesian University of Technology in Katowice Poland on September 17 19 2018

**Nodes in Transport Networks - Research, Data Analysis and Modelling** Elżbieta Macioszek, Nan Kang, Grzegorz Sierpiński, 2020-01-06 The publication delivers numerous valuable guidelines particularly useful when making decisions related in the subject matter to road and rail nodes located in dense transport networks The know how displayed while discussing practical examples as well as the decision making support systems described in the publication will certainly attract the interest of those who daily face the challenge of seeking solutions to the operational and functional problems of transport nodes in contemporary transport networks and systems This publication is dedicated to local authorities involved in planning and preparation of development strategies for specific transport related issues in both urban and regional areas as well as to representatives of business and industry being those who participate directly in the implementation of traffic engineering solutions The guidelines provided in individual chapters of the publication will make it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies including those related to synchronisation of road traffic streams improving the capacity road traffic safety analysis evaluation of changes in drivers behaviour on account of introducing countdown timers at signal controlled intersections using UAV data the influence of the type of traffic organisation on the behaviour of pedestrians at tram line crossings On the other hand since the publication also concerns the new approach to theoretical models including potential places of integration of public transport with the railway network or the speed adviser for

pedestrians enabling them to choose the optimal path at signal controlled intersections it should also attract the attention of researches and scientists studying this body of problems The publication entitled Nodes in transport networks research data analysis and modelling contains selected papers submitted to and presented at the 16th Transport Systems Theory and Practice Scientific and Technical Conference organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held on 16 18 September 2019 in Katowice Poland
