Energy and Sustainability C. A. Brebbia, Viktor Popov, 2007 The way in which our society exists operates and develops is strongly influenced by the way in which energy is produced and consumed No process in industry can be performed without a sufficient supply of energy and without industry there can be no production of commodities on which the existence of modern society depends Energy systems have evolved over a long period and more rapidly over the last two centuries as a response to the requirements of industry and society starting with the combustion of fuels and building up to the exploitation of nuclear energy and renewable resources It is clear that the evolution of energy systems is a continuous process which involves constant technological developments and innovation This book publishes papers presented at the First International Conference on Energy and Sustainability Featured topics include Energy Management Energy and the Environment Energy Markets and Policy Energy Efficiency Energy and External Costs Computer Modelling Energy Resources Management Nuclear Fuels Rational Use of Energy Solid Fuel Energy Energy and Built Environment Exergy and Ecology Energy and Life Cycle Analysis Education and Training Energy Systems and Pollution
