It not only covers the key principles but also prepares them for the Fundamentals of Engineering FE and/or Principles and Practice of Engineering PE exams in civil engineering. Topics include road vehicle performance, the geometric alignment of highways, pavement design, traffic analysis, queuing theory, signalized intersections, the assessment of level of service, and traffic forecasting. Highway Noise; a Design Guide for Highway Engineers Bolt, Beranek, and Newman, Bolt, Beranek, and Newman, inc, 1971 Various methods of assessing noise loudness and noise annoyance are reviewed and explained. Sources, types, and intensities of traffic noise are noted. Typical means of abatement and attenuation are described. Design criteria for various land uses ranging from low density to industrial are suggested and compared with the results of previous BBN and British systems for predicting annoyance and complaint, and a design guide for predicting traffic noise capable of being programmed for batch and on-line computer applications is presented in form suitable for use as a working tool. A flow diagram describes the interrelationships of elements in the traffic noise prediction methodology, and each element is discussed in detail in the text. The text is presented as a tape recording that takes the listener through a series of traffic situations with such variables as traffic distance, flow, velocity, distance outdoors and indoors, and presence or absence of absorbers and attenuators.
