**Optimization of Chemical Processes** Thomas F. Edgar, David Mautner Himmelblau, 1988      **Numerical Methods for Engineers** Santosh K Gupta, 1995 This book is intended to be a text for either a first or a second course in numerical methods for students in all engineering disciplines. Difficult concepts which usually pose problems to students are explained in detail and illustrated with solved examples. Enough elementary material that could be covered in the first level course is included. For example, methods for solving linear and nonlinear algebraic equations, interpolation, differentiation, integration, and simple techniques for integrating ODEs and PDEs. Ordinary and partial differential equations, advanced techniques, and concepts that could form part of a second level course. Includes the Runge-Kutta method for solving ODEs, initial value problems, stiffness of ODEs, multiplicity of solutions, convergence, characteristics, the orthogonal collocation method for solving ODEs, boundary value problems, and finite element techniques. An extensive set of graded problems, often with hints, has been included. Some involve simple applications of the concepts and can be solved using a calculator, while several are from real life situations and require writing computer programs or use of library subroutines. Practice on these is expected to build up the reader's confidence in developing large computer codes.

**Model-Based Optimization for Petroleum Refinery Configuration Design** Cheng Seong Khor, 2024-01-03 Model Based Optimization for Petroleum Refinery Configuration Design: An accessible, easy-to-read introduction to the methods of mixed integer optimization with practical applications, real world operational data, and case studies. Interest in model based approaches for optimizing the design of petroleum refineries has increased throughout the industry in recent years. Mathematical optimization based on mixed integer programming has brought about the superstructure optimization method for synthesizing petroleum refinery configurations from multiple topological alternatives. Model Based Optimization for Petroleum Refinery Configuration Design presents a detailed introduction to the use of mathematical optimization to solve both linear and nonlinear problems in the refining industry. The book opens with an overview of petroleum refining processes, basic concepts in mathematical programming, and applications of mathematical programming for refinery optimization. Subsequent chapters address superstructure representations of topological alternatives, mathematical formulation, solution strategies, and various modeling frameworks. Practical case studies demonstrate refinery configuration design, refinery retrofitting, and real world issues and considerations. Presents linear, nonlinear, and mixed integer programming approaches applicable to both new and existing petroleum refineries. Highlights the benefits of model based solutions to refinery configuration design problems. Features detailed case studies of the development and implementation of optimization models. Discusses economic considerations of heavy oil processing, including cash flow analysis of refinery costs and return on capital. Includes numerical examples based on real world operational data and various commercial technologies. Model Based Optimization for Petroleum Refinery Configuration Design is an invaluable resource for researchers, chemical

Chemical Process Control 2 Engineering Foundation (U.S.). Conference, 1982 **CJChE**, 1999-02 **Process Control and Management** P.L. Lee, R.B. Newell, I.T. Cameron, 1998 The purpose of this book is to provide a balanced introduction to process control and management aimed at the general process engineer Rapid changes have occurred in process control over the past decade mainly because of the deployment of robust and effective digital control equipment and the development of the models which underpin the area Historically process control was seen as simply the maintenance of particular process variables at appropriate setpoints This very narrow view has been superseded by the view that process control involves the regulation of any given process in the context of a complete processing plant to maximise the economic return from the plant This wider definition brings into play a range of control regimes from basic regulatory control through advanced regulatory control to complex process management The organization of the book reflects this hierarchy and is thus split into 3 parts covering basic regulatory control advanced process control and finally process management The book is completed by the inclusion of several useful appendices covering mathematical modelling process optimisation and
