

## **Concept Mastery Questions**

### **(AKA Your Study Guide)**

**Directions:** Answer all questions below. Be detailed in your responses as this is excellent study preparation for your quiz and final exam! This is your study guide. All information on this list is possible quiz or final exam questions. If it is not on this list, you won't be tested on it. This should take you a minimum of 10 hours to complete - make sure you're starting early and working through it in manageable chunks. Do not try to complete this all at once!

#### **Chapter 1:**

1. What is the definition of psychology? Describe what is meant by the term's *behavior* and *mental processes*.

Psychology is the scientific study of behavior and mental processes. Behavior is everything we do that can be directly observed; such as, two people kissing or a baby crying. Mental processes are the thoughts, feelings, and motives that people experience privately but cannot be observed directly; such as, thinking about kissing someone or a baby's feelings when its mother leaves a room.

2. Describe the four core scientific attitudes.

1. **Critical Thinking:** The process of thinking deeply and actively, asking questions, and evaluating the evidence.

2. **Curiosity:** The scientist notices things in the world (a star in the sky, an insect, a happy person) and wants to know what it is and why it is that way.

3. **Skepticism:** Skeptical people challenge whether a supposed fact is really true. Being skeptical can mean questioning what "everybody knows".

4. **Objectivity:** Being objective involves trying to see things as they really are, not just as the observer would like them to be. Scientific knowledge is based on objective evidence.

3. Who is often considered the "Founding father of modern psychology" and what was his research?

Wilhelm Wundt founded the first psychology laboratory in 1879 at The University of Leipzig. He and two of his students performed an experiment to measure the time lag between the instant a person heard a sound and when that person pressed a telegraph key to signal that he had heard it.

4. Describe the difference between structuralism and functionalism.

Structuralism is Wundt's approach to discovering the basic elements, or "structures" of mental processes.

Functionalism is James's approach to mental processes, emphasizing the functions and purposes of the mind and behavior in the individual's adaptation to the environment.

If structuralism is about the "what" of the mind, functionalism is about the "why".

5. Briefly describe the seven different contemporary approaches to Psychology.

1. **Biological approach:** An approach to psychology focusing on the body, especially the brain and nervous system.
