

## Cosmology - Quick Guide

### Cosmology - The Expanding Universe

**Cosmology** is the study of the universe. Tracing back in the time, there were several school of thoughts regarding the origin of the universe. Many scholars believed in the **Steady State Theory**. As per this theory, the universe was always the same, it had no beginning.

While there were a group of people who had faith in the **Big Bang Theory**. This theory predicts the beginning of the universe. There were evidences of hot left out radiation from the Big Bang, which again supports the model. The Big Bang Theory predicts the abundance of light elements in the universe. Thus, following the famous model of Big Bang, we can state that the universe had a beginning. We are living in an expanding universe.

### The Hubble Redshift

In the early 1900's, the state of the art telescope, **Mt Wilson**, a 100-inch telescope, was the biggest telescope then. Hubble was one of the prominent scientists, who worked with that telescope. He discovered there were galaxies outside the Milky Way. **Extragalactic Astronomy** is only 100 years old. Mt Wilson was the biggest telescope until Palmer Observatory was built which had a 200-inch telescope.

Hubble was not the only person observing galaxies outside the Milky Way. Humason helped him. They set out on measuring the spectra of nearby galaxies. They then observed a galactic spectrum was in the visible wavelength range with continuous emission. There were emission and absorption lines on top of the continuum. From these lines, we can make an estimate if the galaxy is moving away from us or towards us.

When we get a spectrum, we assume the strongest line is coming from **H- $\alpha$** . From literature, the strongest line should occur at **6563 Å**, but if the line occurs somewhere around **7000Å**, we can easily say it is redshifted.

From the **Special Theory of Relativity**,
