

PROBLEMS

Q#5.1: In the network of the figure, the switch K is closed at $t = 0$ with the capacitor uncharged. Find values for i , di/dt and d^2i/dt^2 at $t = 0+$, for element values as follows:

V	100 V
R	1000 Ω
C	1 μ F

Switch is closed at $t = 0$ (reference time)

We know

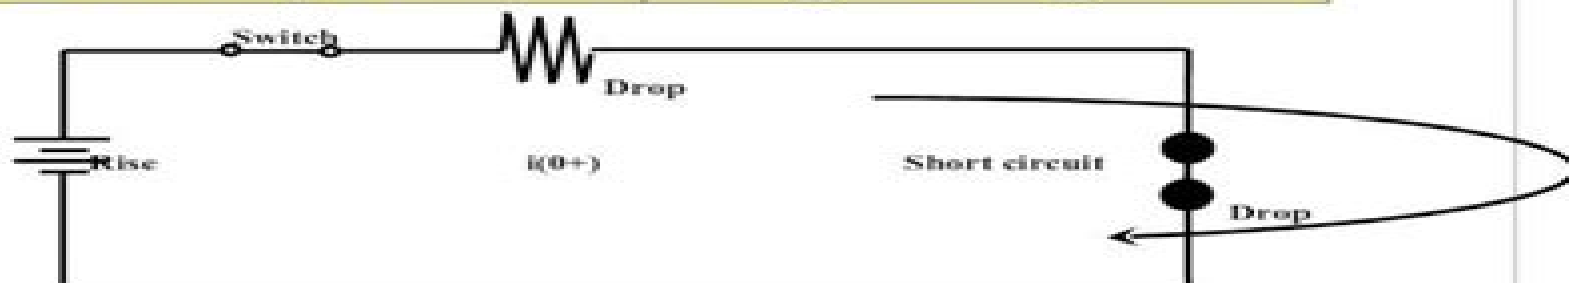

Voltage across capacitor before switching = $V_C(0^-) = 0$ V

According to the statement under Q#5.1,

$V_C(0^+) = V_C(0^-) = 0$ V

$$i_C(0^+) = i(0^+) = \frac{V}{R} = \frac{100}{1000} = 0.1 \text{ Amp.}$$

Element and initial condition	Equivalent circuit at $t = 0+$

Applying KVL for $t \geq 0$

Sum of voltage rise = sum of voltage drop

Network Analysis Mac Elwyn Van Valkenburg, P. A. Bauman, 1976 **Network Analysis and Synthesis** Franklin F. Kuo, 1968 *Network Analysis, Architecture, and Design* James D. McCabe, 2010-07-26 Traditionally networking has had little or no basis in analysis or architectural development with designers relying on technologies they are most familiar with or being influenced by vendors or consultants However the landscape of networking has changed so that network services have now become one of the most important factors to the success of many third generation networks It has become an important feature of the designer's job to define the problems that exist in his network choose and analyze several optimization parameters during the analysis process and then prioritize and evaluate these parameters in the architecture and design of the system *Network Analysis Architecture and Design Third Edition* uses a systems methodology approach to teaching these concepts which views the network and the environment it impacts as part of the larger system looking at interactions and dependencies between the network and its users applications and devices This approach matches the new business climate where customers drive the development of new services and the book discusses how networks can be architected and designed to provide many different types of services to customers With a number of examples analogies instructor tips and exercises this book works through the processes of analysis architecture and design step by step giving designers a solid resource for making good design decisions With examples guidelines and general principles McCabe illuminates how a network begins as a concept is built with addressing protocol routing and management and harmonizes with the interconnected technology around it Other topics covered in the book are learning to recognize problems in initial design analyzing optimization parameters and then prioritizing these parameters and incorporating them into the architecture and design of the system This is an essential book for any professional that will be designing or working with a network on a routine basis Substantially updated design content includes ad hoc networks GMPLS IPv6 and mobile networking Written by an expert in the field that has designed several large scale networks for government agencies universities and corporations Incorporates real life ideas and experiences of many expert designers along with case studies and end of chapter exercises Solutions Manual for A. together the prevailing text analysis methods from each discipline the volume aims to alert researchers to new and exciting possibilities of text analyses across their own disciplinary boundary The volume builds on the fact that each of the disciplines has a common interest in extracting information from political texts The focus on political texts thus facilitates interdisciplinary cross overs The volume also includes chapters combining methods as examples of cross disciplinary endeavours These chapters present an open discussion of the constraints and disadvantages of either quantitative or qualitative methods when evaluating the possibilities of combining analytic tools *Engineering Education* ,1981
