

## Earth Materials

## Igneous Rocks

## Magma Composition

- Rock beneath the Earth's surface is sometimes heated to high enough temperatures that it melts into magma.
- Different magmas have different composition and contain whatever elements were in the rock or rocks that melted.
- The main elements are the same as the elements found in the crust.
- The remaining 1.5% is made up of many other elements that are present in tiny quantities.

## Study Tip

Partial melting and fractional crystallization can be thought of as opposite ways of separating minerals. One uses heating, the other uses cooling.

## Elements in Earth's Crust and Magma

Element	Symbol	Percent
Oxygen	O	46.67%
Silicon	Si	27.7%
Aluminum	Al	8.1%
Iron	Fe	5.0%
Calcium	Ca	3.6%
Sodium	Na	2.8%
Potassium	K	2.6%
Magnesium	Mg	2.1%
Total		98.5%

## Elements in Earth's Crust and Magma

The different geologic settings that produce varying conditions under which rocks melt will be discussed in Concept Plate Tectonics.

- **Temperature:** Increases with depth (melting more likely at greater depths).
- **Pressure:** Pressure increases with depth, but increased pressure raises the melting temperature, (melting less likely at higher pressures).
- **Water:** As water increases, the melting point decreases.
- **Rock Composition:** Temperature must be high enough to melt at least some minerals in the rock.

## Melting and Crystallization

- Minerals that melt at the lowest temperatures melt first.
- If liquid separates solids in partial melting or fractional crystallization, then chemical composition of the liquid and solid will be different.
