

## Details of Mitosis

These diagrams show the detailed stages of mitosis. This cell has  $n = 2$ ; i.e. 2 pairs of homologous chromosomes.

### Interphase

- no chromosomes visible
- DNA, histones and centrioles all replicated

### Prophase

- chromosomes condensed and visible
- centrioles at opposite poles of cell
- nucleolus disappears

### Metaphase

- nuclear envelope disappears
- chromosomes align along equator of cell
- spindle fibres (microtubules) connect centrioles to chromosomes

### Anaphase

- centromeres split, allowing chromatids to separate
- chromatids move towards poles, centromeres first, pulled by motor proteins "walking" along the microtubule tracks

### Telophase

- spindle fibres disperse
- nuclear envelopes form
- chromatids uncoil and become too thin to see

### Cytokinesis

- In animal cells a ring of actin filaments forms round the equator of the cell and then tightens to form a **cleavage furrow**, which splits the cell in two.

- In plant cells vesicles move to the equator, line up and fuse to form two membranes called the **cell plate**. A new cell wall is laid down between the membranes, which fuses with the existing cell wall.

**Transforming Teaching With Generative AI** Nick Gaspar, This guide provides educators with practical tools for integrating artificial intelligence into their K-12 and higher education classrooms. This user friendly book breaks down technical concepts to make AI understandable for educators without a background in technology. It builds from trusted frameworks and connects AI to the methods and expertise educators already bring to their teaching. Key topics include the basics of generative AI, prompt design, classroom integration, ethical concerns, assessment design, and academic integrity. Rather than treating AI as a challenge to work around, this guide encourages educators to see it as a way to accelerate learning and support students more effectively. With examples, case studies, strategies, and activities drawn from real teaching contexts, readers will learn how to set clear expectations for AI use and build classroom cultures where students engage with AI in thoughtful and practical ways. Transforming Teaching With Generative AI offers teachers, teacher educators, instructional designers, and academic leaders a clear framework for using AI with purpose and on their own terms. Book Features: Offers a real world approach to using AI in

education including how to think critically about ethical challenges while staying focused on student learning. Uses clear explanations of complex topics from large language models to writing successful AI prompts. Provides guidance for using AI to craft assignments, assessments and personalize student learning. Aligns new tools with existing teaching goals and values including connecting AI integration to trusted models like TPACK and TILT. Includes user friendly features for busy educators such as sample prompts, checklists and discussion questions that support reflection and ease of implementation.
