Trent, 2007-12-18 With the ever increasing volume of information in clinical medicine researchers and health professionals need computer based storage processing and dissemination In this book leading experts in the field provide a series of articles focusing on software applications used to translate information into outcomes of clinical relevance This book is the perfect guide for researchers and clinical scientists working in this emerging omics era

Tissue Engineering Hansjörg Hauser, Martin M. Fussenegger, 2007-07-27 Features Leading experts present their own most recent advances Includes a wide spectrum of methods representing tissue engineering in many diverse disciplines Supplies an understanding of diverse technologies and methods

Cardiovascular Disease, Volume 1 Qing Wang, 2007-10-26 Cardiovascular disease is the leading cause of death in developed countries but is quickly becoming an epidemic in such well populated countries as China India and other developing nations Cardiovascular research is the key to the prevention diagnosis and management of cardiovascular disease Vigorous and cross disciplinary approaches are required for successful cardiovascular research As the boundaries between different scientific disciplines particularly in the life sciences are weakening and disappearing a successful investigator needs to be competent in many different areas including genetics cell biology biochemistry physiology and structural biology The newly developed field of molecular medicine is a cross disciplinary science that seeks to comprehend disease causes and mechanisms at the molecular level and to apply this basic research to the prevention diagnosis and treatment of diseases and disorders This volume in the Methods in Molecular Medicine series Cardiovascular Disease provides comprehensive coverage of both basic and the most advanced approaches to the study and characterization of cardiovascular disease These methods will advance knowledge of the mechanisms diagnoses and treatments of cardiovascular disease Cardiovascular Disease is a timely volume in which the theory and principles of each method are described in the Introduction section followed by a detailed description of the materials and equipment needed and step by step protocols for successful execution of the method A notes section provides advice for potential problems any modifications and alternative methods

DNA Vaccines Mark W. Saltzman, Hong Shen, Janet L. Brandsma, 2008-02-02 In the early 1990s almost 200 yr after Edward Jenner demonstrated the effectiveness of the smallpox vaccine a new paradigm for vaccination emerged The conventional method of vaccination required delivery of whole pathogens or structural subunits but in this new approach DNA or genetic information was administered to elicit an immunological response Once it was observed that plasmid DNA delivered in vivo led to production of an encoded transgene

1 two ground breaking studies demonstrated that immunological responses could be generated against antigenic transgenes via plasmid DNA delivered by DNA vaccination as this approach is called 2 3 The appearance of this new vaccination strategy coincided with advances in molecular biology which provided new tools to study and manipulate the basic elements of an organism's genome and also could also be applied to the design and production of DNA vaccines DNA Vaccines is a major updated and enhancement of the first edition It reviews state of the art methods in DNA vaccine technology with chapters describing DNA vaccine design delivery systems adjuvants current applications methods of production and quality control Consistent with the approach of the Methods in Molecular Medicine series these chapters contain detailed practical procedures on the latest DNA vaccine technology The enthusiasm for DNA vaccine technology is made clear by the number of research studies published on this topic since the mid 1990s New Antibiotic Targets W. Scott Champney, 2008-01-15 This book examines specific techniques which can be used to explore new drug targets and the effectiveness of new antibiotics By testing new antimicrobial agents and modified existing drugs the most vulnerable cell processes such as cell wall and membrane synthesis DNA replication RNA transcription and protein synthesis can be better exploited This in depth volume however delves even deeper by identifying additional novel cellular targets for these new therapies The book will provide laboratory investigators with the vital tools they need to test the antimicrobial potential of products and to curb the rise of so many infectious diseases **Bone Marrow and Stem Cell Transplantation** Meral Beksac, 2007-05-03 This volume is a compendium of cutting edge molecular methods for the successful transplantation of hematopoietic stem cells The contributors are world renowned leaders in the field They describe promising tools for stem cell transplant research models such as in vivo bioluminescence imaging They discuss HLA typing PCR SSP typing and HLA antigens This volume is an invaluable source for biochemists molecular biologists and clinicians *American Book Publishing Record*, 2006

Roulston,John M. S. Bartlett,2008-02-01 We are currently experiencing a fundamental shift in the way in which we approach the characterization of cancer Never before has the make up of cancer tissues and individual cells been so exhaustively researched and characterized We are now capable of producing molecular fingerprints that characterize the expression of all known and unknown genes within tumors and their surrounding tissues More than 30 000 different genes may be measured in each patient's tumor in a single experiment Simultaneously novel therapies that exploit the molecular roadmap have been developed and are now being offered to patients These novel agents such as Glivec Herceptin Iressa and others specifically target individual genes within tumors and can produce dramatic responses in some patients These drugs are only the forerunners of a coming tidal wave of novel therapeutics that individually target specific molecules within cancer cells more than 300 such agents are currently in phase I or II clinical trials This is an exciting time for cancer specialists and patients alike However if we have learned anything from the past 50 or more years of research into cancer it is that Lord Beaverbrook in founding the British national health service in the 1950s was frighteningly prescient when he defined the primary goal of health care to be Diagnosis Diagnosis Diagnosis Now more than ever it is essential that appropriate diagnostic methods and approaches are applied to the selection of patients for treatment *Single-Cell Protein Analysis* Aik T.
