Single Page Applications Raphaël Vercruyssen, 2013. In deze scriptie wordt het onderwerp Single Page Application SPA beschreven. Een Single Page Application is de combinatie van het beste van een web app en een desktop application. Bij een web app is er geen installatie vereist en je moet nooit een update doen als gebruiker. Bij een desktop applicatie heb je het voordeel dat alles zeer snel en snappy verloopt doordat al je data op het device zit. Een Single Page Application tracht dus een applicatie te zijn die in de browser draait maar met offline storage. Dit kon vroeger niet bereikt worden maar sinds de komst van de HTML5 standaard hebben moderne browsers lokale opslag ter beschikking. Om data op te halen wordt er gebruik gemaakt van de AJAX techniek zodat de pagina niet volledig hoeft te herladen voordat je de inhoud kan zien. Zoals de naam het al zegt is dit een applicatie met slechts 1 HTML pagina. Bij een Single Page App heb je de keuze om al je HTML in 1 bestand te steken of om te opteren voor templates. Indien je kiest voor het gebruiken van templates verminder je de digitale voetafdruk van je index pagina heel wat. Zeker als je gebruik maakt van veel verschillende pagina's zal je er dus voordeel aan doen om een templating engine te gebruiken. Er bestaan een aantal verschillende types zoals jQuery templating engine maar aangezien in deze scriptie het MVVM framework knockoutJS wordt besproken zullen we gebruik maken van de templating engine ontworpen door Jim Cowart, namelijk Knockout.js External Template Engine. Naast het eerder vermelde KnockoutJS worden ook AmplifyJS en SammyJS besproken. Dit zijn beide zeer handige frameworks voor het opbouwen van een SPA. Amplify gebruiken we voor het ophalen van data via AJAX. Het maakt ook het gebruik van web storage zeer gemakkelijk. Indien de browser van de gebruiker geen HTML5 web storage ondersteunt maakt hij gebruik van andere technologieën om hetzelfde effect te bereiken. Sammy wordt gebruikt om de hash routing te regelen en het maakt

[Server-Driven Web Apps with Htmx](#) R. Mark Volkmann, 2024-08-27. htmx is a library that adds logic and server interaction to HTML. You get the effect of using a front end SPA framework without writing front end code. Use any server side programming language and framework to build server applications with endpoints that simply return snippets of HTML. Dynamically update portions of the current web page from HTTP responses. Add interactivity with JavaScript and libraries.

such Alpine and `_hyperscript` Make your apps more secure by escaping user supplied content and specifying a Content Security Policy Go beyond basic HTTP requests with WebSockets and server sent events The `htmx` JavaScript library gives you a new way to craft web applications The `htmx` approach differs significantly from that of the currently popular single page application SPA frameworks rather than write a bunch of JavaScript you simply annotate HTML elements before you send them to the browser The resulting code is easier to understand and modify and because it downloads less to the browser and doesn't need JSON creation and parsing you'll find it performs better too Rethink web application design write code in any language that simply responds to requests with `htmx` snippets Dynamically update portions of the current web page directly from the server Implement common patterns such as lazy loading input validation CSS transitions active search optimistic updates pagination infinite scroll polling and click to edit Add interactivity with JavaScript and libraries such as Alpine and `_hyperscript` Use the `htmx` JavaScript API to simplify DOM operations Make your web apps more secure escape user supplied content use Subresource Integrity hashes and enforce a Content Security Policy Go beyond the basic HTTP request response pattern with WebSockets and server sent events Discover a simpler way to implement web applications that emphasizes web fundamentals What You Need A modern web browser and the ability to build and run a local HTTP server using the server side language and framework of your choice The code examples are fully compatible with `htmx` 2.0
