Tunable Lasers Handbook Frank J. Duarte,1996-01-08 Many laser applications depend on the ability of a particular laser to be frequency tunable Among the many different types of frequency tunable lasers are dye lasers excimer lasers and semiconductor lasers Thisbook gives active researchers and engineers the practical information they need to choose an appropriate tunable laser for their particular applications Presents a unified and integrated perspective on tunable lasers Includes sources spanning the electromagnetic spectrum from the UV to the FIR Contains 182 figures and 68 tables Provides coverage of optical parametric oscillators and tunable gas liquid solid state and semiconductor lasers **Tunable Laser**

Optics Frank J. Duarte,2003-08-29 The chapters in this handbook will provide self contained treatment of the topic to allow readers to go directly to the appropriate chapter to deal with a particular topic The knowledge and experience here integrates aspects of laser oscillators laser amplifiers laser systems engineering of rugged laser cavities and more

Semiconductor Lasers II Eli Kapon,1999-01-14 Judging from the impact it has on our everyday lives the semiconductor laser has emerged as perhaps the most important laser device currently in use This volume presents information on recent advances in materials and structures **Future directions in novel laser source development: Dynamical properties, and beam manipulation** Xing Fu,Tijmen Euser,Shu-Wei Huang,Nicolas Joly,2022-12-19 **Springer Handbook of Lasers and Optics** Frank Träger,2007-06-29 Springer Handbook of Lasers and Optics gives a complete and up to date overview of this area in one consistent book All chapters are written by leading experts They are clearly structured with coherent presentation and editing A CD ROM is included for easy search The book is designed for daily use in the office or laboratory and offers descriptive text data and references needed for anyone working with lasers and optical instruments With a foreword by Theodor W H nsch the book will interest optical physicists and optical engineers at universities and in industrial research and development Solid-State Mid-Infrared Laser Sources Irina T. Sorokina,Konstantin L.

Vodopyanov,2003-07-10 The book describes the most advanced techniques for generating coherent light in the mid infrared region of the spectrum These techniques represent diverse areas of photonics and include heterojunction semiconductor lasers quantum cascade lasers tunable crystalline lasers fiber lasers Raman lasers and optical parametric laser sources Offering authoritative reviews by internationally recognized experts the book provides a wealth of information on the essential principles and methods of the generation of coherent mid infrared light and on some of its applications The instructive nature of the book makes it an excellent text for physicists and practicing engineers who want to use mid infrared laser sources in spectroscopy medicine remote sensing and other fields and for researchers in various disciplines requiring a broad introduction to the subject **Advanced Characterization Techniques for Optics, Semiconductors, and**

American Book Publishing Record ,1998 **MEMS: A Practical Guide of Design, Analysis, and Applications** Jan Korvink, Oliver Paul, 2010-05-28 MEMS are rapidly moving from the research laboratory to the marketplace Many market studies indicate not only a tremendous market potential of MEMS devices year by year we see the actual market grow as the technology matures In fact these days many large silicon foundries have a MEMS group exploring this promising technology including such giants as INTEL and Motorola Yet MEMS are fundamentally different from microelectronics This means that companies with an established track record in these branches need to adapt their skills whereas companies that want to enter the miniaturization market need to establish an entirely new set of capabilities The same can be said of engineers with classical training who will also need to be educated toward their future professional activity in the MEMS field Here are some questions that a company or technologist may ask I have an existing product with miniaturization market potential Which technology should I adopt What are the manufacturing options available for miniaturization What are the qualitative differences How do we maintain a market lead for products based on MEMS Is there CAD support Can we outsource manufacturing Which skills in our current capability need only adaptation What skills need to be added Professors Jan Korvink and Oliver Paul have set out to answer these questions in a form that addresses the needs of companies commercial practitioners and technologists Laser Focus, Lasers, Optics, Fiber optics Buyers' Guide ,1984 Sci-tech News ,1996
