Transport Phenomena in Fires Mohammad Faghri, Bengt Sundén, 2008 Controlled fires are beneficial for the generation of heat and power while uncontrolled fires like fire incidents and wildfires are detrimental and can cause enormous material damage and human suffering. This edited book presents the state of the art of modeling and numerical simulation of the important transport phenomena in fires. It describes how computational procedures can be used in analysis and design of fire protection and fire safety. Computational fluid dynamics, turbulence modeling, combustion, soot formation, thermal radiation modeling are demonstrated and applied to pool fires, flame spread, wildfires, fires in buildings and other examples.

**Internal Combustion Processes of Liquid Rocket Engines** Zhen-Guo Wang, 2016-08-29 This book concentrates on modeling and numerical simulations of combustion in liquid rocket engines covering liquid propellant atomization, evaporation of liquid droplets, turbulent flows, turbulent combustion, heat transfer, and combustion instability. It presents some state-of-the-art models and numerical methodologies in this area. The book can be categorized into two parts. Part 1 describes the modeling for each subtopic of the combustion process in the liquid rocket engines. Part 2 presents detailed numerical methodology and several representative applications in simulations of rocket engine combustion.

Wind Turbine Aerodynamics Wen Zhong Shen, 2019-10-04 Wind turbine aerodynamics is one of the central subjects of wind turbine technology. To reduce the levelized cost of energy (LCOE), the size of a single wind turbine has been increased to 12 MW at present, with further increases expected in the near future. Big wind turbines and their associated wind farms have many advantages but also challenges. The typical effects are mainly related to the increase in Reynolds number and blade flexibility. This Special Issue is a collection of 21 important research works addressing the aerodynamic challenges appearing in such developments. The 21 research papers cover a wide range of problems related to wind turbine aerodynamics, which includes atmospheric turbulent flow modeling, wind turbine flow modeling, wind turbine design, wind turbine control, wind farm flow modeling in complex terrain, wind turbine noise modeling, vertical axis wind turbine, and offshore wind energy. Readers from all over the globe are expected to greatly benefit from this Special Issue collection regarding their own work and the goal of enabling the technological development of new environmentally friendly and cost effective wind energy systems in order to reach the target of 100% energy use from renewable sources worldwide by 2050.

**Two-Fluid Model Stability, Simulation and Chaos** Martín López de Bertodano, William Fullmer, Alejandro Clausse, Victor H. Ransom, 2016-11-09 This book addresses the linear and nonlinear two phase stability of the one dimensional Two Fluid Model (TFM) material waves and the numerical methods used to solve it. The TFM fluid dynamic stability is a problem that remains open since its inception more than forty years ago. The difficulty is formidable because it involves the combined challenges of two phase topological structure and turbulence, both nonlinear phenomena. The one dimensional approach permits the separation of the former from the latter. The authors first analyze the kinematic and Kelvin-Helmholtz instabilities with the simplified one dimensional

Fixed Flux Model FFM They then analyze the density wave instability with the well known Drift Flux Model They demonstrate that the Fixed Flux and Drift Flux assumptions are two complementary TFM simplifications that address two phase local and global linear instabilities separately Furthermore they demonstrate with a well posed FFM and a DFM two cases of nonlinear two phase behavior that are chaotic and Lyapunov stable On the practical side they also assess the regularization of an ill posed one dimensional TFM industrial code Furthermore the one dimensional stability analyses are applied to obtain well posed CFD TFM s that are either stable RANS or Lyapunov stable URANS with the focus on numerical convergence
