## Final Report

This report addresses the requirements of 2705(j)(1) of the Public Health Service Act and answers the following research questions:

- What are the characteristics and prevalence of current workplace wellness programs?
- What is the evidence for program impact?
- What is the role of incentives under wellness programs?
- What are key facilitators of successful wellness programs?

The project has four data collection and analysis streams:

- a review of the scientific and trade literature to identify the prevalence of wellness programs, their key components, their use of incentives, their effectiveness, their return on investment, and best practices.
- the RAND Employer Survey, a national survey of employers with at least 50 employees in the public and private sectors, including federal and state agencies, to assess program prevalence, type of wellness programs, information on incentives, and perceived program impacts.
- statistical analyses of medical claims and wellness program data from a convenience sample of large employers in the Care Continuum Alliance (CCA) database to assess the effects of wellness programs on health and cost outcomes and the effect of incentives on program participation.
- five case studies of existing wellness programs in a diverse set of employers to enhance our understanding of the effectiveness of wellness programs by providing specific examples and experiences of individual employers and employees.

### Characteristics and Prevalence of Workplace Wellness Programs

According to the RAND Employer Survey conducted for this study, approximately half of U.S. employers offer wellness promotion initiatives, and larger employers are more likely to have more complex wellness programs. Programs often include wellness screening activities to identify health risks and interventions to reduce risks and promote healthy lifestyles. Most employers (72 percent of those offering a wellness program) characterize their wellness programs as a combination of screening activities and interventions. Wellness benefits can be offered by employers or a vendor to all employees or through their group health plans to plan members.

Screening activities use Health Risk Assessments (HRAs), self-administered questionnaires on health-related behaviors (e.g., exercise patterns) and risk factors (e.g., body weight) and may include clinical screenings to collect biometric data—for instance, height, weight, blood pressure, and blood glucose

On the other attention is given to youth unemployment and to those forms of employment which might have an impact on young people. Section II touches upon the relationship between the environment and industrial relations while the third part broaches the topic of the impact of technology in the context of the Fourth Industrial Revolution also known as Industry 4.0. ### **Chronic Health Conditions and Work**

Alyssa K. McGonagle, 2025-04-15 People with chronic health conditions make up a large and integral part of the workforce. While few would deny that chronic health conditions can create challenges for both workers and their employing organizations there are misperceptions about how best to support affected employees. Typical supports that organizations have historically used including wellness programs and return to work programs are insufficient to meet the under recognized needs of employees with chronic health conditions. This book translates research and provides practical solutions and steps for implementing a more proactive integrated approach to help leaders and frontline managers better support their employees and to help organizations gain a competitive advantage through attracting and retaining valued employees. Chronic Health Conditions and Work provides background information on chronic health conditions disabilities the legal landscape and typical supports that organizations have used along with information on complex and common work health challenges faced by employees managers and organizations. The book then provides proactive solutions that leaders frontline managers human resource professionals coaches consultants and other practitioners can enact at the levels of the organization culture benefits policies the job autonomy flexibility supervisor support job accommodations and the individual employee coaching mentoring group programs. Readers will develop a comprehensive understanding of both the importance of and how to implement changes at all three of these levels to decrease stigma and promote employee well being inclusion and work ability and will gain tools to help them make a business case for taking a more proactive approach to supporting employees with chronic health conditions.
