*Mental Health, Social Media, and the Meta* Dov Greenbaum, Nazanin Alavi, 2024-11-11 One of the most damaging externalities from the recent pandemic has been the rise in mental health issues Many psychiatric disorders have strong genetic components and although the extent of the genetic influence for many conditions has been extensively tested by genome wide association studies GWAS there remains much to be understood regarding the genetics of these health issues Twin studies for example have found a relatively high rate of inheritance for depression and anxiety disorders To better appreciate the role that genetics plays in these disorders it is useful to understand the extent to which other factors also contribute to the condition Other major contributing factors to mental disorders are the environment and psychological factors These environmental and psychological concerns have been further exacerbated by the growth of social media and the requirement especially for young adults and teenagers to always be on It is likely that the metaverse in whatever form it ultimately takes will further exacerbate these conditions On the other hand social media and the metaverse can be tools to help those suffering from mental health conditions Online therapists and bots can provide frontline care to those who can't or won't go to an in person therapy session AI can be employed to provide some forms of therapy in light of the growing demand for licensed therapists and the limited supply
