

# PROGRAM OVERVIEW

The HealthPointe program consists of 5 phases as outlined below.

## 1. Preparation Days (7 Days) – Get ready for weight loss

This is the time you adjust your mind to the program and the prospect of losing weight. You eat whatever you want – without overdoing it ie be sure to have 3 meals per day – and get started on the supplementation. Also invest time in listening to audios recommended by your coach to give you a better understanding of the path ahead, assist in motivation and place your mind in a positive frame of mind ready for the program and weight loss.

## 2. Jump Start Plan (3 Days)

This is the period where your body learns to burn fat instead of carbs. All meals and snacks are protein and should only be one serve of protein for ALL meals and snacks.

## 3. Weight Loss Plan (28 Days)

This is the main weight loss phase of the program. During these 4 weeks be sure to follow the meal plans and record your progress in your Journal. Aim for up to 65 carbs per day and enjoy 3 balanced meals and protein snacking every 60-90 mins.

## 4. Weight Stabilisation Plan (14 Days)

Key phase of the program to stabilize your body at its new weight. After this phase, you can repeat the Jump Start, Weight Loss and Weight Stabilisation days, until you have reached your goal weight and are ready to move onto maintenance.

It's about eating real food and snacking...eating every 60mins to 90mins

## Weight Loss Plan Ai Overview Last 90 Days:

**Artificial Intelligence in Radiation Oncology and Biomedical Physics** Gilmer Valdes, Lei Xing, 2023-08-14 This pioneering book explores how machine learning and other AI techniques impact millions of cancer patients who benefit from ionizing radiation. It features contributions from global researchers and clinicians focusing on the clinical applications of machine learning for medical physics. AI and machine learning have attracted much recent attention and are being increasingly adopted in medicine with many clinical components and commercial software including aspects of machine learning integration. General principles and important techniques in machine learning are introduced followed by discussion of clinical applications particularly in radiomics, outcome prediction, registration and segmentation, treatment planning, quality assurance, image processing and clinical decision making. Finally, a futuristic look at the role of AI in radiation oncology is provided. This book brings medical physicists and radiation oncologists up to date with the most novel applications of machine learning to medical physics. Practitioners will appreciate the insightful discussions and detailed descriptions in each chapter. Its emphasis on clinical applications reaches a wide audience within the medical physics profession.
