

ESL Reading Comprehension + Writing Activity on "Sign Languages"

Student Name:

Sign languages are the unique and natural form of communication developed by the deaf community, consisting of hearing-impaired people using gestures, facial expressions, and body movements for effective meaning. These languages are different from natural languages and their grammar follows very closely to existing natural languages, consisting of gestures, movements, and body postures.

The history of sign language shows that it existed, though in various other names, and in various regions of the world, much earlier than through documentation of these names. However, written records that could prove the existence of sign languages were not available until the 18th century, when the first written record of sign language was made.

The evolution and development of sign language goes back to the 18th century. French scholars, then known as the "Panthéon" school, started recording the first known documents of sign language. They recorded the first form of the grammar of sign language and the first known sign language dictionary. In 1820, the first sign language dictionary was published in France, titled "Dictionnaire des Langues des Signes ou Langue des Malentendants" by Jean-Baptiste de la Brosse. This language dictionary was the first to describe sign language in a formal grammar. In the United States, the first sign language dictionary was published in 1880, titled "The Language of the Deaf" by Thomas Gallaudet. Both of these documents were important in defining and spreading sign language throughout the world.

Learning to interpret different sign languages is not an easy task. There are many different sign languages, including American Sign Language (ASL), British Sign Language (BSL), and French Sign Language (FSL). These languages are not only different in their grammar, but also in their vocabulary, and are often used in different contexts and environments.

The structure of sign languages is different. They are gestural, non-auditory, non-verbal, and non-oral, and are based on visual communication.

Questions:

- What is sign language and how is it different from natural languages?
- What are the different types of sign languages in the world?

Simplified Signs: A Manual Sign-Communication System for Special Populations, Volume 1. John D.

Bonvillian, Nicole Kissane Lee, Tracy T. Dooley, Filip T. Loncke, 2020-07-30 Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension memorization and formation by limiting the complexity of the motor skills required to form each sign and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project and places the Simplified Sign System in a wider context of sign usage historically and by different populations. Volume 2 presents the lexicon of signs totalling approximately 1000 signs each with a clear illustration and a written description of how the sign is formed as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism or aphasia, it may also assist the communication needs of a wider audience such as healthcare professionals, aid workers, military personnel, travellers or parents and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people and will be of great interest to researchers and educators alike.
