Database Programming with JDBC and Java George Reese, 2000 Java and databases make a powerful combination Getting the two sides to work together however takes some effort largely because Java deals in objects while most databases do not This book describes the standard Java interfaces that make portable object oriented access to relational databases possible and offers a robust model for writing applications that are easy to maintain It introduces the JDBC and RMI packages and uses them to develop three tier applications applications divided into a user interface an object oriented logic component and an information store The book begins with a quick overview of SQL for developers who may be asked to handle a database for the first time It then explains how to issue database queries and updates through SQL and JDBC It also covers the use of stored procedures and other measures to improve efficiency where these are available But the book's key contribution is a set of patterns that let developers isolate critical tasks like object creation information storage and retrieval and the committing or aborting of transactions The second edition includes more basics of JDBC and SQL with more examples and a deeper discussion about the architecture of a robust maintainable database application The second edition also explains the relationship between JDBC and Enterprise JavaBeans

Learn JDBC The Hard Way: A Hands-On Guide to PostgreSQL and SQL Server Driven Programming Vivian Siahaan, Rismon Hasiholan Sianipar, 2019-11-23 This book offers the straightforward practical answers you need to help you do your job This hands on tutorial reference guide to PostgreSQL and SQL Server is not only perfect for students and beginners but it also works for experienced developers who

aren't getting the most from PostgreSQL and SQL Server. As you would expect, this book shows how to build from scratch two different databases: PostgreSQL and SQL Server, using Java. In designing a GUI and as an IDE, you will make use of the NetBeans tool. In chapter one, you will learn how to install NetBeans JDK 11 and the PostgreSQL connector. How to integrate external libraries into projects. How the basic PostgreSQL commands are used. How to query statements to create databases, create tables, fill tables, and manipulate table contents is done. In chapter two, you will learn querying data from the PostgreSQL using JDBC, including establishing a database connection, creating a statement object, executing the query, processing the resultset object, querying data using a statement that returns multiple rows, querying data using a statement that has parameters, inserting data into a table using JDBC, updating data in PostgreSQL database using JDBC, calling PostgreSQL stored function using JDBC, deleting data from a PostgreSQL table using JDBC, and PostgreSQL JDBC transaction. In chapter three, you will learn the basics of cryptography using Java. Here you will learn how to write a Java program to count Hash MAC Message Authentication Code, store keys in a KeyStore, generate PrivateKey and PublicKey, encrypt/decrypt data, and generate and verify digital prints. You will also learn how to create and store salt passwords and verify them. In chapter four, you will create a PostgreSQL database named Bank and its tables. In chapter five, you will create a Login table. In this case, you will see how to create a Java GUI using NetBeans to implement it. In addition to the Login table, in this chapter, you will also create a Client table. In the case of the Client table, you will learn how to generate and save public and private keys into a database. You will also learn how to encrypt/decrypt data and save the results into a database. In chapter six, you will create an Account table. This account table has the following ten fields: account_id (primary key), client_id (primary key), account_number, account_date, account_type, plain_balance, cipher_balance, decipher_balance, digital_signature, and signature_verification. In this case, you will learn how to implement generating and verifying digital prints and storing the results into a database. In chapter seven, you create a table named Client_Data which has seven columns: client_data_id (primary key), account_id (primary key), birth_date, address, mother_name, telephone, and photo_path. In chapter eight, you will be taught how to create a SQL Server database named Crime and its tables. In chapter nine, you will be taught how to extract image features utilizing BufferedImage class in Java GUI. In chapter ten, you will be taught to create Java GUI to view, edit, insert, and delete Suspect table data. This table has eleven columns: suspect_id (primary key), suspect_name, birth_date, case_date, report_date, suspect_status, arrest_date, mother_name, address, telephone, and photo. In chapter eleven, you will be taught to create Java GUI to view, edit, insert, and delete Feature_Extraction table data. This table has eight columns: feature_id (primary key), suspect_id (foreign key), feature1, feature2, feature3, feature4, feature5, and feature6. In chapter twelve, you will add two tables: Police_Station and Investigator. These two tables will later be joined to Suspect table through another table File_Case which will be built in the seventh chapter. The Police_Station has six columns: police_station_id (primary key), location, city, province, telephone, and photo. The Investigator has eight columns: investigator_id (primary key), investigator_name, rank, birth_date, gender, address, telephone, and

photo Here you will design a Java GUI to display edit fill and delete data in both tables In chapter thirteen you will add two tables Victim and File_Case The File_Case table will connect four other tables Suspect Police_Station Investigator and Victim The Victim table has nine columns victim_id primary key victim_name crime_type birth_date crime_date gender address telephone and photo The File_Case has seven columns file_case_id primary key suspect_id foreign key police_station_id foreign key investigator_id foreign key victim_id foreign key status and description Here you will also design a Java GUI to display edit fill and delete data in both tables Finally this book is hopefully useful and can improve database programming skills for every Java PostgreSQL SQL Server programmer
