Sturm-Liouville Operators and Applications Vladimir Aleksandrovich Marchenko, 2011-04-27 The spectral theory of Sturm Liouville operators is a classical domain of analysis comprising a wide variety of problems This book aims to show what can be achieved with the aid of transformation operators in spectral theory as well as their applications

Sturm-Liouville Operators and Applications Vladimir Aleksandrovich Marchenko, 2011 The spectral theory of Sturm Liouville operators is a classical domain of analysis comprising a wide variety of problems Besides the basic results on the structure of the spectrum and the eigenfunction expansion of regular and singular Sturm Liouville problems it is in this domain that one dimensional quantum scattering theory inverse spectral problems and the surprising connections of the theory with nonlinear evolution equations first become related The main goal of this book is to show what can be achieved with the aid of transformation operators in spectral theory as well as in their *Direct and Inverse Sturm-Liouville Problems*

Vladislav V. Kravchenko, 2020-07-28 This book provides an introduction to the most recent developments in the theory and practice of direct and inverse Sturm Liouville problems on finite and infinite intervals A universal approach for practical solving of direct and inverse spectral and scattering problems is presented based on the notion of transmutation transformation operators and their efficient construction Analytical representations for solutions of Sturm Liouville equations as well as for the integral kernels of the transmutation operators are derived in the form of functional series revealing interesting special features and lending themselves to direct and simple numerical solution of a wide variety of problems The book is written for undergraduate and graduate students as well as for mathematicians physicists and engineers interested in direct and inverse spectral problems **Schrödinger Operators: Eigenvalues and Lieb-Thirring Inequalities** Rupert L.

Frank, Ari Laptev, Timo Weidl, 2022-11-17 The analysis of eigenvalues of Laplace and Schrödinger operators is an important and classical topic in mathematical physics with many applications This book presents a thorough introduction to the area suitable for masters and graduate students and includes an ample amount of background material on the spectral theory of linear operators in Hilbert spaces and on Sobolev space theory Of particular interest is a family of inequalities by Lieb and Thirring on eigenvalues of Schrödinger operators which they used in their proof of stability of matter The final part of this book is devoted to the active research on sharp constants in these inequalities and contains state of the art results serving as a reference for experts and as a starting point for further research *Bitangential Direct and Inverse Problems for Systems of Integral and Differential Equations* Damir Z. Arov, Harry Dym, 2012-09-13 An essentially self contained treatment ideal for

mathematicians physicists or engineers whose research is connected with inverse problems **Bibliometric Analysis II**

Murat DAL, Nursel ALP DAL, İlhami AY, 2025-06-17 **Methods of Mathematical Physics** Alexey N. Karapetyants, Vladislav V. Kravchenko, 2022-11-17 This textbook provides a thorough overview of mathematical physics highlighting classical topics as well as recent developments Readers will be introduced to a variety of methods that reflect current trends in research

including the Bergman kernel approach for solving boundary value and spectral problems for PDEs with variable coefficients. With its careful treatment of the fundamentals as well as coverage of topics not often encountered in textbooks this will be an ideal text for both introductory and more specialized courses. The first five chapters present standard material including the classification of PDEs, an introduction to boundary value and initial value problems and an introduction to the Fourier method of separation of variables. More advanced material and specialized treatments follow including practical methods for solving direct and inverse Sturm-Liouville problems, the theory of parabolic equations, harmonic functions, potential theory, integral equations and the method of non-orthogonal series. *Methods of Mathematical Physics* is ideal for undergraduate students and can serve as a textbook for a regular course in equations of mathematical physics as well as for more advanced courses on selected topics.

Inverse Problems: Modelling and Simulation Alemdar Hasanov, Roman Novikov, Karel Van Bockstal, 2025-07-17. This volume presents the latest theoretical and experimental advancements in the field of inverse problems in recent years. It includes outstanding research results that reflect current theoretical and numerical aspects of inverse problems and their various applications. The volume is a collection of selected contributions from nearly three hundred invited presentations at the International Conference Inverse Problems Modelling and Simulation IPMS 2024 held from May 26 to June 1, 2024, in Malta. The topics covered in this volume are closely related to emerging deterministic and stochastic models in the fields of medical imaging, biology, geophysics, radar, computer science, communication theory, signal processing, visualization, engineering, and economics. The contributions in this volume reflect a broad range of problems in the theory and applications of inverse problems that are useful for mathematicians, physicists, engineers, and researchers working with inverse problems.

Operator and Matrix Theory, Function Spaces, and Applications Marek Ptak, Hugo J. Woerdeman, Michał Wojtylak, 2024-04-02. This volume features presentations from the International Workshop on Operator Theory and its Applications that was held in Kraków, Poland, September 6-10, 2022. The volume reflects the wide interests of the participants and contains original research papers in the active areas of Operator Theory. These interests include weighted Hardy spaces, geometry of Banach spaces, dilations of the tetrablock, contractions, Toeplitz and Hankel operators, symplectic Dirac operator, pseudodifferential and differential operators, singular integral operators, non-commutative probability, quasi-multipliers, Hilbert transform, small rank perturbations, spectral constants, Banach-Lie groupoids, reproducing kernels, and the Kippenhahn curve. The volume includes contributions by a number of the world's leading experts and can therefore be used as an introduction to the currently active research areas in operator theory.
