Underwater Technology (Great Britain),2010-06 Dealing exclusively with underwater instrumentation control and communication technology for subsea oil and gas production this book has been structured to cover relevant experience and challenges in frontier subsea developments      *Subsea Controls and Data Acquisition 2006* ,2006 This volume contains the proceedings for the SCADA conference held in Toulon France on 7 8 June 2006      Offshore Operations and Engineering Shashi Shekhar Prasad Singh,Jatin Agarwal,Nag Mani,2019-12-06 This book provides a comprehensive understanding of each aspect of offshore operations including conventional methods of operations emerging technologies legislations health safety and environment impact of offshore operations The book starts by coverage of notable offshore fields across the globe and the statistics of present oil production covering all types of platforms available along with their structural details Further it discusses production storage and transportation production equipment safety systems automation storage facilities and transportation Book ends with common legislation acts and comparison of different legislation acts of major oil gas producing nations The book is aimed at professionals and researchers in petroleum engineering offshore technology subsea engineering and Explores the engineering technology system environmental operational and legislation aspects of offshore productions systems Covers most of the subsea engineering material in a concise manner Includes legislation of major oil and gas producing nations pertaining to offshore operations oil and gas Incorporates case studies of major offshore operations oil and gas accidents and lessons learnt Discusses environment impact of offshore operations      Wave Kinematics and Environmental Forces Society for Underwater Technology (SUT),2013-03-14 In determining the response of offshore structures it is of utmost importance to determine in the most correct manner all factors which contribute to the total force acting on these structures Applying the Morison formula Morison et al 1950 to calculate forces on offshore slender structures uncertainties related to the understanding of the wave climate the hydrodynamic force coefficients and the kinematics of ocean waves represent the most important contributions to the uncertainties in the prediction of the total forces on these structures Haver and Gudmestad 1992 Traditional calculation of forces on offshore structures involves the use of regular waves with the following non linearities incorporated use of regular wave theories incorporating higher order terms use of Morison equation having a nonlinear drag term inclusion of the effect of the free surface by integrating all contributions to total forces and moments from the sea floor to the free surface of the waves In order to describe the sea more realistically the ocean surface is to be described as an irregular sea surface represented by its energy spectrum The associated decomposition of the sea surface is given as a linear sum of linear waves The total force is found by integrating the contribution from all components in the wave spectrum to the free surface The kinematics of each component must therefore be determined      SUBTECH '91 Society for Underwater Technology (SUT),2012-12-06 The concept of using flexible reelable pipe to transport liquids gases and vapours is not a new one As early as the 1940s a steel braided elastomeric pipeline was developed for the Allied Forces in order to transport fuels to support the Normandy Beachheads In fact the longest flexible

pipeline ever constructed is likely to be that laid across the English Channel as part of Operation Pluto The methodology used to handle and instal such pipe is also not new Ellis 1943 London in an early patent specification identifies three basic objectives for a flexible pipelining method These are prefabrication of the pipe onshore coiling of the pipe on suitable drums or reels and using such reels to lay pipe from anchored or motorised barges The design concept for flexible pipe is also not a new invention given that flexible hoses and umbilicals have been in service for more than sixty years A break through was however achieved by the French Institute of Petroleum in the early 1970s when they developed an improved steel reinforced pipe structure having a high axial loading capacity which utilised corrosion and hydrocarbon resistant polymers to extend pipe service lifetime This early pipe design utilised established cable making techniques to apply steel armour and axially and radially reinforce alternating layers of polymer sheaths The pipe was primarily developed as a flowline for use in static seabed applications
