Hart,Gary T. Moore,1971 *The Development of Spatial Cognition* Robert Cohen,2013-08-21 First published in 1985 The present book represents a statement of the state of the art in a very important aspect of spatial cognition its development

The Child in the Physical Environment Christopher Spencer,Mark Blades,Kim Morsley,1989-04-24 Presents a developmental approach to children and their understanding of space and spatial relationships Traces development from the earliest concepts of the self in space through the location of objects to movement through the immediate area route and landmark learning and the development of images of distant places Also covers applied topics includes a detailed chapter on the special problems of blind children and techniques for working with them **Spatial Cognition** D. R. Olson,E.

Bialystok,2014-03-18 First published in 1983 This is a volume in a series on Child Psychology This book offers a set of theoretical ideas which make up a quite general theory of the mental representation of space which accounts both for much of spatial perception but also much of spatial thought The system is general and economical and can be readily applied to novel problems as we illustrated in regard to Piaget s water level problem and Koler s letter recognition problem **The Emerging Spatial Mind** Jodie M. Plumert,John P. Spencer,2007-04-12 Humans are profoundly influenced by the space around us This volume sheds light on how our experiences thinking about and interacting in space through time foster and shape the emerging spatial mind

Interactions Between Language and Thought in the Development of Spatial Cognition

Anna Shusterman,2006 **Verbs in Space** Caroline Elaine Jackson,2006 **Learning Topology** Sixto Cordero Maisonet,2016 This thesis establishes a qualitative analysis of current playground design and challenges the minimal role that playgrounds play in education spatial cognition and the development of a child s understanding of space McDonalds playgrounds were introduced in the 1970s and proliferated across the nation there are over 8 000 units They created a model that has permeated American culture This model is based on two paradigms the creation of a totally risk free world and a monolithic approach to playground design which relies on the post and platform construction model Though this might be

okay for a fast food pit stop the user quickly loses interest Historians attribute this design model to the loss of relevance of physical play This thesis attempts to understand what playgrounds could be if the focus of the design shifts from one that prioritizes safety and ease of assembly to one that amplifies a child's spatial experience and sensibility Models of learning through play are well documented and find their origin in the creation of the first kindergarten by Friedrich Froebel However these pedagogical tactics evolved separately from playgrounds and relied mostly on small toys that challenged children to understand and cultivate different areas of knowledge Spatial cognition was rarely nurtured and broadly assumed to develop independently This thesis argues for the relevance of spatial cognition and grounds itself in the research of Jean Piaget the father of developmental psychology Through his research Piaget outlined the different stages a child goes through to develop an understanding of space I focus on the first stage the topological stage where children lacking an understanding of geometry understand the world through relationships of containment location direction etc This innate knowledge quickly disappears as a child grows and develops an understanding of the world in terms of its geometrical parameters The abstract grammatical particles that describe spatial or temporal relationships in almost every existing language are called adpositions They describe in a topological manner the contextual relationships we have or that we understand objects to have with other objects It is through the creation of spaces that expose children to a broad array of adpositional conditions that this thesis offers the developing child the possibility of learning through and about space by instrumentalizing his or her worldview Seeking a model that encourages participation and topological variability this thesis proposes play spaces that inhabit a middle scale mobile modifiable objects that engage the child in different topological states depending on their position and orientation

Spatial Cognition David R. Olson, Ellen Bialystok, 1983 **Spatial Cognition** Joan Stiles, Mark Kritchevsky, Ursula Bellugi, 2022 Looking at the ways humans perceive, interpret, remember and interact with events occurring in space this book focuses on two aspects of spatial cognition How does spatial cognition develop What is the relation between spatial cognition and the brain This book offers a unique opportunity to share the combined efforts of scientists from varied disciplines including cognitive and developmental psychology, neuropsychology, behavioral neurology and neurobiology in the process of interacting and exchanging ideas Based on a conference held at the Neuroscience Conference Center of the Salk Institute for Biological Studies this book explores current scientific trends seeking a biological basis for understanding the relationships among brain, mind and behavior
