The Organic Chemistry of Sugars Daniel E. Levy,Péter Fügedi,2005-09-21 Intrigued as much by its complex nature as by its outsider status in traditional organic chemistry the editors of The Organic Chemistry of Sugars compile a groundbreaking resource in carbohydrate chemistry that illustrates the ease at which sugars can be manipulated in a variety of organic reactions Each chapter contains numerous examples demonstrating the methods and strategies that apply mainstream organic chemistry to the chemical modification of sugars The book first describes the discovery development and impact of carbohydrates followed by a discussion of protecting group strategies glycosylation techniques and oligosaccharide syntheses Several chapters focus on reactions that convert sugars and carbohydrates to non carbohydrate molecules including the substitution of sugar hydroxyl groups to new groups of synthetic or biological interest cyclitols and carbasugars as well as endocyclic heteroatom substitutions Subsequent chapters demonstrate the use of sugars in chiral catalysis their roles as convenient starting materials for complex syntheses involving multiple stereogenic centers and syntheses for monosaccharides The final chapters focus on new and emerging technologies including approaches to combinatorial carbohydrate chemistry the biological importance and chemical synthesis of glycopeptides and the medicinally significant concept of glycomimetics Presenting the organic chemistry of sugars as a solution to many complex synthetic challenges The Organic Chemistry of Sugars provides a comprehensive treatment of the manipulation of sugars and their importance in mainstream organic chemistry Daniel E Levy editor of the Drug Discovery Series is the founder of DEL BioPharma a consulting service for drug discovery programs He also maintains a blog that explores organic chemistry

Glycoimmunology 2 John S. Axford,2012-12-06 The Jenner International Glycoimmunology Meetings have charted the rapid development of glycobiology within the field of inflammation In less than a decade the science has grown from basically being involved in carbohydrate analysis to the understanding of how sugars are associated with inflammation and how they have potential as anti inflammatory therapeutics The 4th Jenner International Glycoimmunology Meeting was recently held in Loutraki Greece and set the scene for what promises to be an exciting future for the speciality Discussion reflected the rapid advances glycobiology is making and ranged from the basic biochemistry of carbohydrate physiology to therapeutic trials utilizing synthetic sugars designed to block inflammatory responses The meeting is summarized in considerable detail in this book which will provide the interested scientist and clinician with the essential up to date facts within the field of glyco immunology Acknowledgments Many people have been involved in ensuring the success of the Jenner Glycoimmunology Meetings but none more so than my secretary Susan Henderson who has borne the brunt of all four meetings and is currently preparing for the 5th

Combinatorial Chemistry and Molecular Diversity in Drug Discovery

Eric M. Gordon,James F. Kerwin,1998-08-27 Increasing pressure to identify optimize develop and commercialize novel drugs more rapidly and more cost effectively has led to an urgent demand for technologies that can reduce the time to market for new products Molecular diversity of both natural and synthetic materials provides a valuable source of compounds for identifying and optimizing new drug leads Through the rapidly evolving technology of combinatorial chemistry it is now possible to produce libraries of small molecules to screen for novel bioactivities This powerful new technology has begun to help pharmaceutical companies find new drug candidates quickly save significant dollars in preclinical development costs and ultimately change their fundamental approach to drug discovery Included among the many topics Historical background Library strategy and design Solid phase synthesis Small molecular libraries Automation analytical and computational methodology Biological diversity Strategies for screening combinatorial libraries Combinatorial drug screening and development Combinatorial chemistry information management

Carbohydrate Chemistry Geert-Jan Boons,1998 The chemistry and biochemistry of carbohydrates have become key research areas throughout the world Responding to the enormous interest expressed in these fields this new book has brought together a range of contributors each working at the forefront of carbohydrate chemistry and biochemistry to provide concise authoritative and timely review of these exciting areas Aimed at chemists biochemists and biologists the reader will find this book an invaluable introduction to and review of the most important developments in carbohydrate chemistry As a distinct chemical group the carbohydrates comprising mono oligo and polysaccharides and their derivatives are the most abundant group of natural products From simple monosaccharides produced in photosynthesis to polysaccharides built in complex biochemical reactions carbohydrates are produced in huge quantities by plant and animal life Apart from dietary and structural uses in plants and animals it is now well established that carbohydrates play a number of key roles in living systems From cell cell recognition to hormonal activities carbohydrates are implicated in a wide range of cellular processes This new understanding has forced the study of carbohydrates to the forefront of modern chemical research For example the nature of the role of carbohydrates in living systems offers the potential to provide important lead compounds in the development of new bioactive molecules Similarly

the relative abundance of carbohydrates is prompting research aimed at utilizing simple monosaccharides as starting materials for a range of high value chemical product offering a renewable alternative to current starting materials
